oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_NestedCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CaseUsage</code>	The <code>CaseUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The <code>ConcernUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedConnection</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConnectorAsUsage</code>	The <code>ConnectorAsUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> . Note that this list includes <code>BindingConnectorAsUsages</code> and <code>SuccessionAsUsages</code> , even though these are <code>ConnectorAsUsages</code> but not <code>ConnectionUsages</code> .
<code>oslc_sysmlv2:usage_NestedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The <code>ConstraintUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedEnumeration</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:EnumerationUsage</code>	The code>EnumerationUsages that are <code>nestedUsages</code> of this <code>Usage</code> .

<code>oslc_sysmlv2:usage_NestedInterface</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:InterfaceUsage</code>	The <code>InterfaceUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedItem</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ItemUsage</code>	The <code>ItemUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedMetadata</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:MetadataUsage</code>	The <code>MetadataUsages</code> that are <code>nestedUsages</code> of this of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedOccurrence</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:OccurrenceUsage</code>	The <code>OccurrenceUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .
<code>oslc_sysmlv2:usage_NestedPart</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The <code>PartUsages</code> that are <code>nestedUsages</code> of this <code>Usage</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-82] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#TypeFeaturing>
- **Summary:** TypeFeaturingShape
- **Description:** A **TypeFeaturing** is a **Featuring Relationship** in which the **featureOfType** is the **source** and the **featuringType** is the **target**.

TypeFeaturing Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:typeFeaturing_FeatureOfType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType . It is the source of the TypeFeaturing .
oslc_sysmlv2:typeFeaturing_FeaturingType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType . It is the target of the TypeFeaturing .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:typeFeaturing_OwningFeatureOfType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	A featureOfType that is also the owningRelatedElement of this TypeFeaturing .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-83].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#EndFeatureMembership>
- **Summary:** EndFeatureMembershipShape
- **Description:** **EndFeatureMembership** is a **FeatureMembership** that requires its **memberFeature** be owned and have **isEnd = true**.

EndFeatureMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType , making it an ownedFeature of the owningType .
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The <code>relatedElements</code> from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The <code>relatedElements</code> to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-84].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#AttributeUsage>

- **Summary:** AttributeUsageShape
- **Description:** An **AttributeUsage** is a **Usage** whose type is a **DataType**. Nominally, if the type is an **AttributeDefinition**, an **AttributeUsage** is a usage of a **AttributeDefinition** to represent the value of some system quality or characteristic. However, other kinds of kernel **DataTypes** are also allowed, to permit use of **DataTypes** from the Kernel Model Libraries. An **AttributeUsage** itself as well as all its nested **features** must be referential (non-composite).

AttributeUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:attributeUsage_AttributeDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:DataType	The DataTypes that are the types of this AttributeUsage . Nominally, these are AttributeDefinitions , but other kinds of kernel DataTypes are also allowed, to permit use of DataTypes from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType.
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings, for which the Feature is the typedFeature.
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature, determining its owningType.
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature.
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature, such that the values must be instances of all the types. The types of a Feature are derived from its typings and the types of its subsettings. If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace.
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace, which are the memberElements of all memberships of the Namespace.
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace, including (at least) the union of ownedMemberships and importedMemberships.
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports, for which the Namespace is the importOwningNamespace.
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace, which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships, for which the Namespace is the membershipOwningNamespace.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-85].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Predicate>
- **Summary:** PredicateShape
- **Description:** A **Predicate** is a **Function** whose **result parameter** has type **Boolean** and multiplicity **1..1**.

Predicate Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Behavior .
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior .
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:function_Expression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that are steps in the calculation of the result of this Function .
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout .
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-86].

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#MetadataAccessExpression`
- **Summary:** MetadataAccessExpressionShape
- **Description:** A `MetadataAccessExpression` is an `Expression` whose `result` is a sequence of instances of `Metaclasses` representing all the `MetadataFeature` annotations of the `referencedElement`. In addition, the sequence includes an instance of the reflective `Metaclass` corresponding to the MOF class of the `referencedElement`, with values for all the abstract syntax properties of the `referencedElement`.

MetadataAccessExpression Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
<code>dcterms:source</code>	Zero-or-one	false	Resource	Reference	<code>oslc:Any</code>	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement.
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement, if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this <code>Element</code> , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this <code>Element</code> has no <code>owningNamespace</code> or if there is not a complete ownership chain of named <code>Namespaces</code> from a root <code>Namespace</code> to this <code>Element</code> .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The <code>TextualRepresentations</code> that annotate this <code>Element</code> .
<code>oslc_sysmlv2:expression_Function</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Function</code>	The <code>Function</code> that types this <code>Expression</code> .
<code>oslc_sysmlv2:expression_IsModelLevelEvaluable</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this <code>Expression</code> meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:metadataAccessExpression_ReferencedElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element whose metadata is being accessed.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-87].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Interaction>
- **Summary:** InteractionShape
- **Description:** An **Interaction** is a **Behavior** that is also an **Association**, providing a context for multiple objects that have behaviors that impact one another.

Interaction Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:association_AssociationEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of the Association that identify the things that can be related by it. A concrete Association must have at least two associationEnds . When it has exactly two, the Association is called a <i>binary Association</i> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:association_RelatedType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The types of the associationEnds of the Association , which are the relatedElements of the Association considered as a Relationship .
oslc_sysmlv2:association_SourceType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The source relatedType for this Association . It is the first relatedType of the Association .
oslc_sysmlv2:association_TargetType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The target relatedTypes for this Association . This includes all the relatedTypes other than the sourceType .
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Behavior .
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior .
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types, but not including those of the remaining Types. For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction.
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true.
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-88].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#DecisionNode`
- **Summary:** `DecisionNodeShape`
- **Description:** A `DecisionNode` is a `ControlNode` that makes a selection from its outgoing `Successions`.

DecisionNode Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage . Nominally, these would be ActionDefinitions , but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_OwningUsage</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The Usage in which this Usage is nested (if any).
<code>oslc_sysmlv2:usage_Usage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The Usages that are features of this Usage (not necessarily owned).
<code>oslc_sysmlv2:usage_Variant</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
<code>oslc_sysmlv2:usage_VariantMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:VariantMembership</code>	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-89].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#CaseDefinition`
- **Summary:** CaseDefinitionShape
- **Description:** A **CaseDefinition** is a **CalculationDefinition** for a process, often involving collecting evidence or data, relative to a subject, possibly involving the collaboration of one or more other actors, producing a result that meets an objective.

CaseDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionDefinition_Action	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are steps in this ActionDefinition , which define the actions that specify the behavior of the ActionDefinition .
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Behavior .
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior .
oslc_sysmlv2:calculationDefinition_Calculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The actions of this CalculationDefinition that are CalculationUsages .
oslc_sysmlv2:caseDefinition_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this CaseDefinition that represent actors involved in the case.
oslc_sysmlv2:caseDefinition_ObjectiveRequirement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage representing the objective of this CaseDefinition .
oslc_sysmlv2:caseDefinition_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this CaseDefinition that represents its subject.
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures .
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships .
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.

Prefixes Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:function_Expression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that are steps in the calculation of the result of this Function.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures.
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type.
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships, for which the Type is the owningType. Each such FeatureMembership identifies an ownedFeature of the Type.
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings, have the Type as their typeIntersected.
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations, for which the Type is the specific Type.
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings, having the Type as their typeUnioned.
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type. For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-90].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#WhileLoopActionUsage`
- **Summary:** WhileLoopActionUsageShape
- **Description:** A `WhileLoopActionUsage` is a `LoopActionUsage` that specifies that the `bodyAction ActionUsage` should be performed repeatedly while the result of the `whileArgument Expression` is true or until the result of the `untilArgument Expression` (if provided) is true. The `whileArgument Expression` is evaluated before each (possible) performance of the `bodyAction`, and the `untilArgument Expression` is evaluated after each performance of the `bodyAction`.

WhileLoopActionUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage . Nominally, these would be ActionDefinitions , but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:loopActionUsage_BodyAction	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage to be performed repeatedly by the LoopActionUsage . It is the second parameter of the LoopActionUsage .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc_sysmlv2:whileLoopActionUsage_UntilArgument	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Expression	The Expression whose result, if false, determines that the bodyAction should continue to be performed. It is the (optional) third owned parameter of the WhileLoopActionUsage .
oslc_sysmlv2:whileLoopActionUsage_WhileArgument	Exactly-one	false	Resource	Either	oslc_sysmlv2:Expression	The Expression whose result, if true, determines that the bodyAction should continue to be performed. It is the first owned parameter of the WhileLoopActionUsage .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-91] .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmLv2#ExhibitStateUsage>
- **Summary:** ExhibitStateUsageShape
- **Description:** An [ExhibitStateUsage](#) is a [StateUsage](#) that represents the exhibiting of a [StateUsage](#). Unless it is the [StateUsage](#) itself, the [StateUsage](#) to be exhibited is related to the [ExhibitStateUsage](#) by a [ReferenceSubsetting Relationship](#). An [ExhibitStateUsage](#) is also a [PerformActionUsage](#), with its [exhibitedState](#) as the [performedAction](#).

ExhibitStateUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:eventOccurrenceUsage_EventOccurrence	Exactly-one	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsage referenced as an event by this EventOccurrenceUsage. It is the referenceFeature of the ownedReferenceSubsetting for the EventOccurrenceUsage, if there is one, and, otherwise, the EventOccurrenceUsage itself.
oslc_sysmlv2:exhibitStateUsage_ExhibitedState	Exactly-one	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsage to be exhibited by the ExhibitStateUsage. It is the performedAction of the ExhibitStateUsage considered as a PerformActionUsage, which must be a StateUsage.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:performActionUsage_PerformedAction	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage to be performed by this PerformedActionUsage . It is the eventOccurrence of the PerformActionUsage considered as an EventOccurrenceUsage , which must be an ActionUsage .
oslc_sysmlv2:stateUsage_DoAction	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage of this StateUsage to be performed while in the state defined by the StateDefinition . It is the owned ActionUsage related to the StateUsage by a StateSubactionMembership with kind = do .
oslc_sysmlv2:stateUsage_EntryAction	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage of this StateUsage to be performed on entry to the state defined by the StateDefinition . It is the owned ActionUsage related to the StateUsage by a StateSubactionMembership with kind = entry .
oslc_sysmlv2:stateUsage_ExitAction	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage of this StateUsage to be performed on exit to the state defined by the StateDefinition . It is the owned ActionUsage related to the StateUsage by a StateSubactionMembership with kind = exit .
oslc_sysmlv2:stateUsage_IsParallel	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the nestedStates of this StateUsage are to all be performed in parallel. If true, none of the nestedActions (which include nestedStates) may have any incoming or outgoing Transitions . If false, only one nestedState may be performed at a time.
oslc_sysmlv2:stateUsage_StateDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this StateUsage . Nominally, these would be StateDefinitions , but kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-92] .
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#ViewDefinition`
- **Summary:** ViewDefinitionShape
- **Description:** A **ViewDefinition** is a **PartDefinition** that specifies how a view artifact is constructed to satisfy a **viewpoint**. It specifies a **viewConditions** to define the model content to be presented and a **viewRendering** to define how the model content is presented.

ViewDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:viewDefinition_SatisfiedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The composite ownedRequirements of this ViewDefinition that are ViewpointUsages for viewpoints satisfied by the ViewDefinition .
oslc_sysmlv2:viewDefinition_View	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The usages of this ViewDefinition that are ViewUsages .
oslc_sysmlv2:viewDefinition_ViewCondition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions related to this ViewDefinition by ElementFilterMemberships , which specify conditions on Elements to be rendered in a view.
oslc_sysmlv2:viewDefinition_ViewRendering	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsage to be used to render views defined by this ViewDefinition , which is the referencedRendering of the ViewRenderingMembership of the ViewDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-93].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#LifeClass>
- **Summary:** LifeClassShape
- **Description:** A **LifeClass** is a **Class** that specializes both the **Class Occurrences::Life** from the Kernel Semantic Library and a single **OccurrenceDefinition**, and has a multiplicity of 0..1. This constrains the **OccurrenceDefinition** being specialized to have at most one instance that is a complete **Life**.

LifeClass Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The TextualRepresentations that annotate this Element .
<code>oslc_sysmlv2:namespace_ImportedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The Memberships in this Namespace that result from the ownedImports of this Namespace .
<code>oslc_sysmlv2:namespace_Member</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
<code>oslc_sysmlv2:namespace_Membership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
<code>oslc_sysmlv2:namespace_OwnedImport</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Import</code>	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
<code>oslc_sysmlv2:namespace_OwnedMember</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
<code>oslc_sysmlv2:namespace_OwnedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features of this Type with isEnd = true .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the featureMemberships of this Type .
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-94].

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URLs.

- **Describes:** `http://open-services.net/ns/sysmlv2#RequirementConstraintMembership`
- **Summary:** RequirementConstraintMembershipShape
- **Description:** A `RequirementConstraintMembership` is a `FeatureMembership` for an assumed or required `ConstraintUsage` of a `RequirementDefinition` or `RequirementUsage`..

RequirementConstraintMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType , making it an ownedFeature of the owningType .
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:requirementConstraintMembership_Kind	Exactly-one	false	unspecified	Either	oslc_sysmlv2:RequirementConstraintKind	Whether the RequirementConstraintMembership is for an assumed or required ConstraintUsage .
oslc_sysmlv2:requirementConstraintMembership_OwnedConstraint	Exactly-one	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsage that is the ownedMemberFeature of this RequirementConstraintMembership .
oslc_sysmlv2:requirementConstraintMembership_ReferencedConstraint	Exactly-one	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsage that is referenced through this RequirementConstraintMembership . It is the referencedFeature of the ownedReferenceSubsetting of the ownedConstraint , if there is one, and, otherwise, the ownedConstraint itself.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-95].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URLs.

- **Describes:** `http://open-services.net/ns/sysmlv2#OccurrenceUsage`
- **Summary:** OccurrenceUsageShape
- **Description:** An **OccurrenceUsage** is a **Usage** whose **types** are all **Classes**. Nominally, if a **type** is an **OccurrenceDefinition**, an **OccurrenceUsage** is a **Usage** of that **OccurrenceDefinition** within a system. However, other types of Kernel **Classes** are also allowed, to permit use of **Classes** from the Kernel Model Libraries.

OccurrenceUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The <code>Classifiers</code> that are the types of this <code>Usage</code> . Nominally, these are <code>Definitions</code> , but other kinds of Kernel <code>Classifiers</code> are also allowed, to permit use of <code>Classifiers</code> from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The <code>usages</code> of this <code>Usage</code> that are <code>directedFeatures</code> .
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this <code>Usage</code> is a referential <code>Usage</code> , that is, it has <code>isComposite = false</code> .
<code>oslc_sysmlv2:usage_IsVariation</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this <code>Usage</code> is for a variation point or not. If true, then all the <code>memberships</code> of the <code>Usage</code> must be <code>VariantMemberships</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-96].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#RenderingDefinition>
- **Summary:** RenderingDefinitionShape
- **Description:** A **RenderingDefinition** is a **PartDefinition** that defines a specific rendering of the content of a model view (e.g., symbols, style, layout, etc.).

RenderingDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:renderingDefinition_Rendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The usages of a RenderingDefinition that are RenderingUsages .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-97].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#CalculationUsage`
- **Summary:** CalculationUsageShape
- **Description:** A **CalculationUsage** is an **ActionUsage** that is also an **Expression**, and, so, is typed by a **Function**. Nominally, if the **type** is a **CalculationDefinition**, a **CalculationUsage** is a **Usage** of that **CalculationDefinition** within a system. However, other kinds of kernel **Functions** are also allowed, to permit use of **Functions** from the Kernel Model Libraries.

CalculationUsage Properties

<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression.
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at model level, that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature, derived from the chainingFeatures of the ownedFeatureChainings of this Feature, in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .

Prefix Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-98] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#LiteralBoolean>
- **Summary:** LiteralBooleanShape
- **Description:** **LiteralBoolean** is a **LiteralExpression** that provides a **Boolean** value as a result. Its **result parameter** must have type **Boolean**.

LiteralBoolean Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:literalBoolean_Value	Exactly-one	false	unspecified	Either	xsd:boolean	The Boolean value that is the result of evaluating this LiteralBoolean .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-99].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#LiteralRational`
- **Summary:** LiteralRationalShape
- **Description:** A `LiteralRational` is a `LiteralExpression` that provides a `Rational` value as a result. Its `result parameter` must have the type `Rational`.

LiteralRational Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_DeclaredShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
<code>oslc_sysmlv2:element_Documentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Documentation</code>	The Documentation owned by this Element.
<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:literalRational_Value	Exactly-one	false	unspecified	Either	xsd:float	The value whose rational approximation is the result of evaluating this LiteralRational .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings, having the Type as their typeUnioned.
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type. For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-100].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Documentation>
- **Summary:** DocumentationShape
- **Description:** Documentation is a Comment that specifically documents a documentedElement, which must be its owner.

Documentation Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Standards Track Work Product

Prefix Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:annotatingElement_AnnotatedElement	One-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are annotated by this AnnotatingElement. If annotation is not empty, these are the annotatedElements of the annotations. If annotation is empty, then it is the owningNamespace of the AnnotatingElement.
oslc_sysmlv2:annotatingElement_Annotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The Annotations that relate this AnnotatingElement to its annotatedElements.
oslc_sysmlv2:annotatingElement_OwnedAnnotatingRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this AnnotatingElement that are Annotations, for which this AnnotatingElement is the annotatingElement.
oslc_sysmlv2:comment_Body	Exactly-one	false	unspecified	Either	xsd:string	The annotation text for the Comment.
oslc_sysmlv2:comment_Locale	Zero-or-one	false	unspecified	Either	xsd:string	Identification of the language of the body text and, optionally, the region and/or encoding. The format shall be a POSIX locale conformant to ISO/IEC 15897, with the format [language[_territory][.codeset][@modifier]].
oslc_sysmlv2:documentation_DocumentedElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that is documented by this Documentation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-101].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout..
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage.
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage, if isVariation = true. If isVariation = false, then there must be no variants.
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships. If isVariation = true, then this must be all memberships of the Usage. If isVariation = false, then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-102].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Annotation>
- **Summary:** AnnotationShape
- **Description:** An Annotation is a Relationship between an AnnotatingElement and the Element that is annotated by that AnnotatingElement.

Annotation Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:annotation_AnnotatedElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that is annotated by the annotatingElement of this Annotation .
oslc_sysmlv2:annotation_AnnotatingElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:AnnotatingElement	The AnnotatingElement that annotates the annotatedElement of this Annotation .
oslc_sysmlv2:annotation_OwningAnnotatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The annotatedElement of this Annotation , when it is also its owningRelatedElement .
oslc_sysmlv2:annotation_OwningAnnotatingElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:AnnotatingElement	The annotatingElement of this Annotation , when it is also its owningRelatedElement .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element . Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-103].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#FeatureMembership>
- **Summary:** FeatureMembershipShape
- **Description:** A **FeatureMembership** is an **OwningMembership** between a **Feature** in an **owningType** that is also a **Featuring Relationship** between the **Feature** and the **Type**, in which the **featuringType** is the **source** and the **featureOfType** is the **target**. A **FeatureMembership** is always owned by its **owningType**, which is the **featuringType** for the **FeatureMembership** considered as a **Featuring**.

FeatureMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType , making it an ownedFeature of the owningType .
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> to which this Relationship is considered to be directed.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Conjugation>

- **Summary:** ConjugationShape
- **Description:** *Conjugation* is a *Relationship* between two types in which the *conjugatedType* inherits all the *Features* of the *originalType*, but with all *input* and *output Features* reversed. That is, any *Features* with a *direction in* relative to the *originalType* are considered to have an effective *direction* of *out* relative to the *conjugatedType* and, similarly, *Features* with *direction out* in the *originalType* are considered to have an effective *direction* of *in* in the *conjugatedType*. *Features* with *direction inout*, or with no *direction*, in the *originalType*, are inherited without change.

Conjugation Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.

<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement, if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this Element has no <code>owningNamespace</code> or if there is not a complete ownership chain of named <code>Namespaces</code> from a root <code>Namespace</code> to this Element.
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of Elements to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The <code>TextualRepresentations</code> that annotate this Element.
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-105].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#SatisfyRequirementUsage`
- **Summary:** SatisfyRequirementUsageShape
- **Description:** A SatisfyRequirementUsage is an AssertConstraintUsage that asserts, by default, that a satisfied RequirementUsage is true for a specific satisfyingFeature, or, if isNegated = true, that the RequirementUsage is false. The satisfied RequirementUsage is related to the SatisfyRequirementUsage by a ReferenceSubsetting Relationship.

SatisfyRequirementUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:assertConstraintUsage_AssertedConstraint	Exactly-one	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsage to be performed by the AssertConstraintUsage . It is the referenceFeature of the ownedReferenceSubsetting for the AssertConstraintUsage , if there is one, and, otherwise, the AssertConstraintUsage itself.
oslc_sysmlv2:booleanExpression_Predicate	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The Predicate that types this BooleanExpression .
oslc_sysmlv2:constraintUsage_ConstraintDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The (single) Predicate that is the type of this ConstraintUsage . Nominally, this will be a ConstraintDefinition , but other kinds of Predicates are also allowed, to permit use of Predicates from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:invariant_IsNegated	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Invariant is asserted to be false rather than true.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Class</code>	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
<code>oslc_sysmlv2:occurrenceUsage_PortionKind</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:PortionKind</code>	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
<code>oslc_sysmlv2:requirementUsage_ActorParameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The parameters of this RequirementUsage that represent actors involved in the requirement.
<code>oslc_sysmlv2:requirementUsage_AssumedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The owned ConstraintUsages that represent assumptions of this RequirementUsage , derived as the ownedConstraints of the RequirementConstraintMemberships of the RequirementUsage with kind = assumption .
<code>oslc_sysmlv2:requirementUsage_FramedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The ConcernUsages framed by this RequirementUsage , which are the ownedConcerns of all FramedConcernMemberships of the RequirementUsage .
<code>oslc_sysmlv2:requirementUsage_ReqId</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional modeler-specified identifier for this RequirementUsage (used, e.g., to link it to an original requirement text in some source document), which is the declaredShortName for the RequirementUsage .
<code>oslc_sysmlv2:requirementUsage_RequiredConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The owned ConstraintUsages that represent requirements of this RequirementUsage , which are the ownedConstraints of the RequirementConstraintMemberships of the RequirementUsage with kind = requirement .
<code>oslc_sysmlv2:requirementUsage_RequirementDefinition</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:RequirementDefinition</code>	The RequirementDefinition that is the single definition of this RequirementUsage .
<code>oslc_sysmlv2:requirementUsage_StakeholderParameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The parameters of this RequirementUsage that represent stakeholders for the requirement.
<code>oslc_sysmlv2:requirementUsage_SubjectParameter</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The parameter of this RequirementUsage that represents its subject.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:requirementUsage_Text	Zero-or-many	false	unspecified	Either	xsd:string	An optional textual statement of the requirement represented by this RequirementUsage , derived from the bodies of the documentation of the RequirementUsage..
oslc_sysmlv2:satisfyRequirementUsage_SatisfiedRequirement	Exactly-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage that is satisfied by the satisfyingSubject of this SatisfyRequirementUsage . It is the assertedConstraint of the SatisfyRequirementUsage considered as an AssertConstraintUsage , which must be a RequirementUsage .
oslc_sysmlv2:satisfyRequirementUsage_SatisfyingFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that represents the actual subject that is asserted to satisfy the satisfiedRequirement . The satisfyingFeature is bound to the subjectParameter of the SatisfyRequirementUsage .
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The usages of this Usage that are directedFeatures .
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is a referential Usage , that is, it has isComposite = false .
<code>oslc_sysmlv2:usage_IsVariation</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
<code>oslc_sysmlv2:usage_NestedAction</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ActionUsage</code>	The ActionUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAllocation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AllocationUsage</code>	The AllocationUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAnalysisCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AnalysisCaseUsage</code>	The AnalysisCaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_NestedAttribute</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AttributeUsage</code>	The code>AttributeUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedCalculation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CalculationUsage</code>	The CalculationUsage that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CaseUsage</code>	The CaseUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The ConcernUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedConnection</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConnectorAsUsage</code>	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
<code>oslc_sysmlv2:usage_NestedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The ConstraintUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedEnumeration</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:EnumerationUsage</code>	The code>EnumerationUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedFlow</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FlowConnectionUsage</code>	The code>FlowConnectionUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedInterface</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:InterfaceUsage</code>	The InterfaceUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedItem</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ItemUsage</code>	The ItemUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedMetadata</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:MetadataUsage</code>	The MetadataUsages that are nestedUsages of this of this Usage.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_NestedView</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ViewUsage</code>	The ViewUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedViewpoint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ViewpointUsage</code>	The ViewpointUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_OwningDefinition</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Definition</code>	The Definition that owns this Usage (if any).
<code>oslc_sysmlv2:usage_OwningUsage</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The Usage in which this Usage is nested (if any).
<code>oslc_sysmlv2:usage_Usage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The Usages that are features of this Usage (not necessarily owned).
<code>oslc_sysmlv2:usage_Variant</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
<code>oslc_sysmlv2:usage_VariantMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:VariantMembership</code>	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-106].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#AssertConstraintUsage>
- **Summary:** AssertConstraintUsageShape
- **Description:** An **AssertConstraintUsage** is a **ConstraintUsage** that is also an **Invariant** and, so, is asserted to be true (by default). Unless it is the **AssertConstraintUsage** itself, the asserted **ConstraintUsage** is related to the **AssertConstraintUsage** by a ReferenceSubsetting **Relationship**.

AssertConstraintUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:assertConstraintUsage_AssertedConstraint	Exactly-one	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsage to be performed by the AssertConstraintUsage . It is the referenceFeature of the ownedReferenceSubsetting for the AssertConstraintUsage , if there is one, and, otherwise, the AssertConstraintUsage itself.
oslc_sysmlv2:booleanExpression_Predicate	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The Predicate that types this BooleanExpression .
oslc_sysmlv2:constraintUsage_ConstraintDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The (single) Predicate that is the type of this ConstraintUsage . Nominally, this will be a ConstraintDefinition , but other kinds of Predicates are also allowed, to permit use of Predicates from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this Element has no <code>owningNamespace</code> or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of Elements to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The TextualRepresentations that annotate this Element .
<code>oslc_sysmlv2:expression_Function</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Function</code>	The Function that types this Expression .
<code>oslc_sysmlv2:expression_IsModelLevelEvaluable</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
<code>oslc_sysmlv2:expression_Result</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	.
<code>oslc_sysmlv2:feature_ChainingFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The Feature that are chained together to determine the values of this Feature , derived from the <code>chainingFeatures</code> of the <code>ownedFeatureChainings</code> of this Feature , in the same order. The values of a Feature with <code>chainingFeatures</code> are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in <code>chainingFeatures</code> , and so on, to values of the last Feature .
<code>oslc_sysmlv2:feature_Direction</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:FeatureDirectionKind</code>	Indicates how values of this Feature are determined or used (as specified for the <code>FeatureDirectionKind</code>).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions, for which the Feature is the redefiningFeature.
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature, if any, that is a ReferenceSubsetting, for which the Feature is the referencingFeature.
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings, for which the Feature is the subsettingFeature.
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType.
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings, for which the Feature is the typedFeature.
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature, determining its owningType.
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature.
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature, such that the values must be instances of all the types. The types of a Feature are derived from its typings and the types of its subsettings. If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature.
oslc_sysmlv2:invariant_IsNegated	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Invariant is asserted to be false rather than true.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace.
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace, which are the memberElements of all memberships of the Namespace.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:namespace_Membership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
<code>oslc_sysmlv2:namespace_OwnedImport</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Import</code>	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
<code>oslc_sysmlv2:namespace_OwnedMember</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
<code>oslc_sysmlv2:namespace_OwnedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
<code>oslc_sysmlv2:occurrenceUsage_IndividualDefinition</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OccurrenceDefinition</code>	The at most one occurrenceDefinition that has isIndividual = true .
<code>oslc_sysmlv2:occurrenceUsage_IsIndividual</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
<code>oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Class</code>	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
<code>oslc_sysmlv2:occurrenceUsage_PortionKind</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:PortionKind</code>	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
<code>oslc_sysmlv2:step_Behavior</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Behavior</code>	The Behaviors that type this Step .
<code>oslc_sysmlv2:step_Parameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-107].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#FeatureTyping>
- **Summary:** FeatureTypingShape
- **Description:** FeatureTyping is Specialization in which the specific Type is a Feature. This means the set of instances of the (specific) typedFeature is a subset of the set of instances of the (general) type. In the simplest case, the type is a Classifier, whereupon the typedFeature has values that are instances of the Classifier.

FeatureTyping Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featureTyping_OwningFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	A typedFeature that is also the owningRelatedElement of this FeatureTyping .
oslc_sysmlv2:featureTyping_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is being applied by this FeatureTyping .
oslc_sysmlv2:featureTyping_TypedFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that has a type determined by this FeatureTyping .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:specialization_General	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	A Type with a superset of all instances of the specific Type , which might be the same set.
oslc_sysmlv2:specialization_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the specific Type of this Specialization and owns it as its owningRelatedElement .
oslc_sysmlv2:specialization_Specific	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	A Type with a subset of all instances of the general Type , which might be the same set.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:function_Expression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that are steps in the calculation of the result of this Function .
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features of this Type with isEnd = true .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the featureMemberships of this Type .
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:verificationCaseDefinition_VerifiedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages verified by this VerificationCaseDefinition , which are the verifiedRequirements of all RequirementVerificationMemberships of the objectiveRequirement .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-109].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Structure>
- **Summary:** StructureShape
- **Description:** A **Structure** is a **Class** of objects in the modeled universe that are primarily structural in nature. While such an object is not itself behavioral, it may be involved in and acted on by **Behaviors**, and it may be the performer of some of them.

Structure Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout ..
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-110].

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#ControlNode`
- **Summary:** ControlNodeShape
- **Description:** A **ControlNode** is an **ActionUsage** that does not have any inherent behavior but provides constraints on incoming and outgoing **Successions** that are used to control other **Actions**. A **ControlNode** must be a composite owned **usage** of an **ActionDefinition** or **ActionUsage**.

ControlNode Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
<code>dcterms:source</code>	Zero-or-one	false	Resource	Reference	<code>oslc:Any</code>	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-111].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Membership`
- **Summary:** MembershipShape
- **Description:** A **Membership** is a **Relationship** between a **Namespace** and an **Element** that indicates the **Element** is a **member** of (i.e., is contained in) the Namespace. Any **memberNames** specify how the **memberElement** is identified in the **Namespace** and the **visibility** specifies whether or not the **memberElement** is publicly visible from outside the **Namespace**.

Membership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-112].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#RenderingUsage>
- **Summary:** RenderingUsageShape
- **Description:** A **RenderingUsage** is the usage of a **RenderingDefinition** to specify the rendering of a specific model view to produce a physical view artifact.

RenderingUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage. Nominally, these are ItemDefinitions, but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:partUsage_PartDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartDefinition	The itemDefinitions of this PartUsage that are PartDefinitions.
oslc_sysmlv2:renderingUsage_RenderingDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RenderingDefinition	The RenderingDefinition that is the definition of this RenderingUsage .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-113] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#AllocationUsage>
- **Summary:** AllocationUsageShape
- **Description:** An **AllocationUsage** is a usage of an **AllocationDefinition** asserting the allocation of the **source** feature to the **target** feature.

AllocationUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:allocationUsage_AllocationDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationDefinition	The AllocationDefinitions that are the types of this AllocationUsage.
oslc_sysmlv2:connectionUsage_ConnectionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AssociationStructure	The AssociationStructures that are the types of this ConnectionUsage. Nominally, these are , but other kinds of Kernel AssociationStructures are also allowed, to permit use of AssociationStructures from the Kernel Model Libraries.
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector.
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector, which redefine the endFeatures of the associations of the Connector. The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector.
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector.
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector. It is the first relatedFeature.
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector. This includes all the relatedFeatures other than the sourceFeature.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this <code>Element</code> , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this <code>Element</code> has no <code>owningNamespace</code> or if there is not a complete ownership chain of named <code>Namespace</code> s from a root <code>Namespace</code> to this <code>Element</code> .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The <code>TextualRepresentations</code> that annotate this <code>Element</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage. Nominally, these are ItemDefinitions, but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:partUsage_PartDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartDefinition	The itemDefinitions of this PartUsage that are PartDefinitions.
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage.
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-114] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Featuring>

- **Summary:** FeaturingShape
- **Description:** Featuring is a Relationship between a Type and a Feature that is featured by that Type. It asserts that every instance in the domain of the feature must be classified by the type.

Featuring Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-115].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Definition>
- **Summary:** DefinitionShape
- **Description:** A **Definition** is a **Classifier** of **Usages**. The actual kinds of **Definition** that may appear in a model are given by the subclasses of **Definition** (possibly as extended with user-defined *SemanticMetadata*).

Definition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of Elements to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The TextualRepresentations that annotate this Element .
<code>oslc_sysmlv2:namespace_ImportedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The Memberships in this Namespace that result from the ownedImports of this Namespace .
<code>oslc_sysmlv2:namespace_Member</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
<code>oslc_sysmlv2:namespace_Membership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
<code>oslc_sysmlv2:namespace_OwnedImport</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Import</code>	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
<code>oslc_sysmlv2:namespace_OwnedMember</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
<code>oslc_sysmlv2:namespace_OwnedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-116].

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Usage`
- **Summary:** UsageShape
- **Description:** A **Usage** is a usage of a **Definition**. A **Usage** may only be an **ownedFeature** of a **Definition** or another **Usage**.

Usage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
<code>dcterms:source</code>	Zero-or-one	false	Resource	Reference	<code>oslc:Any</code>	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
<code>dcterms:title</code>	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature, derived from the chainingFeatures of the ownedFeatureChainings of this Feature, in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature.
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature.
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature, such that any instance in the domain of the Feature must be classified by all of these Types, including at least all the featuringTypes of its typeFeaturings. If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType.
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings, for which the Feature is the typedFeature.
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature, determining its owningType.
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature.
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature, such that the values must be instances of all the types. The types of a Feature are derived from its typings and the types of its subsettings. If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace.
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace, which are the memberElements of all memberships of the Namespace.
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace, including (at least) the union of ownedMemberships and importedMemberships.
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports, for which the Namespace is the importOwningNamespace.
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace, which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships, for which the Namespace is the membershipOwningNamespace.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .

Standards Track Work Product

Prefixes	Prefix Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2	usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage.
	usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage.
	usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage.
	usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage.
	usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage.

oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-117].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#FlowConnectionUsage`
- **Summary:** FlowConnectionUsageShape
- **Description:** A FlowConnectionUsage is a ConnectionUsage that is also an ItemFlow.

FlowConnectionUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage . Nominally, these would be ActionDefinitions , but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:connectionUsage_ConnectionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AssociationStructure	The AssociationStructures that are the types of this ConnectionUsage . Nominally, these are , but other kinds of Kernel AssociationStructures are also allowed, to permit use of AssociationStructures from the Kernel Model Libraries.
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_DeclaredShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional alternative name for the <code>Element</code> that is intended to be shorter or in some way more succinct than its primary <code>name</code> . It may act as a modeler-specified identifier for the <code>Element</code> , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
<code>oslc_sysmlv2:element_Documentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Documentation</code>	The Documentation owned by this Element.
<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this <code>Element</code> , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this <code>Element</code> has no <code>owningNamespace</code> or if there is not a complete ownership chain of named <code>Namespaces</code> from a root <code>Namespace</code> to this <code>Element</code> .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The <code>TextualRepresentations</code> that annotate this <code>Element</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:flowConnectionUsage_FlowConnectionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Interaction	The Interactions that are the types of this FlowConnectionUsage . Nominally, these are FlowConnectionDefinitions , but other kinds of Kernel Interactions are also allowed, to permit use of Interactions from the Kernel Model Libraries.
oslc_sysmlv2:itemFlow_Interaction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Interaction	The Interactions that type this ItemFlow . Interactions are both Associations and Behaviors , which can type Connectors and Steps , respectively.
oslc_sysmlv2:itemFlow_ItemFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ItemFeature	The ownedFeature of the ItemFlow that is an ItemFeature (if any).
oslc_sysmlv2:itemFlow_ItemFlowEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemFlowEnd	The connectorEnds of this ItemFlow that are ItemFlowEnds .
oslc_sysmlv2:itemFlow_ItemType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The type of values transferred, which is the type of the itemFeature of the ItemFlow .
oslc_sysmlv2:itemFlow_SourceOutputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that provides the items carried by the ItemFlow . It must be an owned output of the source of the ItemFlow .
oslc_sysmlv2:itemFlow_TargetInputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that receives the values carried by the ItemFlow . It must be an owned output of the target participant of the ItemFlow .
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage . Nominally, these are ItemDefinitions , but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:partUsage_PartDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartDefinition	The itemDefinitions of this PartUsage that are PartDefinitions.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> to which this Relationship is considered to be directed.
<code>oslc_sysmlv2:step_Behavior</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Behavior</code>	The <code>Behaviors</code> that type this <code>Step</code> .
<code>oslc_sysmlv2:step_Parameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>parameters</code> of this <code>Step</code> , which are defined as its <code>directedFeatures</code> , whose values are passed into and/or out of a performance of the <code>Step</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-118].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#CollectExpression>
- **Summary:** CollectExpressionShape
- **Description:** A **CollectExpression** is an **OperatorExpression** whose **operator** is "**collect**", which resolves to the **Function ControlFunctions::collect** from the Kernel Functions Library.

CollectExpression Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of Elements to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The TextualRepresentations that annotate this Element .
<code>oslc_sysmlv2:expression_Function</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Function</code>	The Function that types this Expression .
<code>oslc_sysmlv2:expression_IsModelLevelEvaluable</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
<code>oslc_sysmlv2:expression_Result</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	.
<code>oslc_sysmlv2:feature_ChainingFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
<code>oslc_sysmlv2:feature_Direction</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:FeatureDirectionKind</code>	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
<code>oslc_sysmlv2:feature_EndOwningType</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
<code>oslc_sysmlv2:feature_FeaturingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:invocationExpression_Argument	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The value Expressions of the FeatureValues of the owned input parameters of the InvocationExpression .
oslc_sysmlv2:invocationExpression_Operand	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	operand.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:operatorExpression_Operator	Exactly-one	false	unspecified	Either	xsd:string	An operator symbol that names a corresponding Function from one of the standard packages from the Kernel Function Library .
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout ..
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout ..
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-119].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#RequirementVerificationMembership>
- **Summary:** RequirementVerificationMembershipShape
- **Description:** A **RequirementVerificationMembership** is a **RequirementConstraintMembership** used in the objective of a **VerificationCase** to identify a **RequirementUsage** that is verified by the **VerificationCase**.

RequirementVerificationMembership Properties

The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_DeclaredShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
<code>oslc_sysmlv2:element_Documentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Documentation</code>	The Documentation owned by this Element.
<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType , making it an ownedFeature of the owningType .
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:requirementConstraintMembership_Kind	Exactly-one	false	unspecified	Either	oslc_sysmlv2:RequirementConstraintKind	Whether the RequirementConstraintMembership is for an assumed or required ConstraintUsage .
oslc_sysmlv2:requirementConstraintMembership_OwnedConstraint	Exactly-one	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsage that is the ownedMemberFeature of this RequirementConstraintMembership .
oslc_sysmlv2:requirementConstraintMembership_ReferencedConstraint	Exactly-one	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsage that is referenced through this RequirementConstraintMembership . It is the referencedFeature of the ownedReferenceSubsetting of the ownedConstraint , if there is one, and, otherwise, the ownedConstraint itself.
oslc_sysmlv2:requirementVerificationMembership_OwnedRequirement	Exactly-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The owned RequirementUsage that acts as the ownedConstraint for this RequirementVerificationMembership . This will either be the verifiedRequirement , or it will subset the verifiedRequirement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:requirementVerificationMembership_VerifiedRequirement	Exactly-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage that is identified as being verified. It is the referencedConstraint of the RequirementVerificationMembership considered as a RequirementConstraintMembership , which must be a RequirementUsage .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-120].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#StateUsage>
- **Summary:** StateUsageShape

- **Description:** A **StateUsage** is an **ActionUsage** that is nominally the **Usage** of a **StateDefinition**. However, other kinds of kernel **Behaviors** are also allowed as **types**, to permit use of **Behaviors** .

StateUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature, derived from the chainingFeatures of the ownedFeatureChainings of this Feature, in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature.
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:stateUsage_DoAction	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage of this StateUsage to be performed while in the state defined by the StateDefinition . It is the owned ActionUsage related to the StateUsage by a StateSubactionMembership with kind = do .
oslc_sysmlv2:stateUsage_EntryAction	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage of this StateUsage to be performed on entry to the state defined by the StateDefinition . It is the owned ActionUsage related to the StateUsage by a StateSubactionMembership with kind = entry .
oslc_sysmlv2:stateUsage_ExitAction	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage of this StateUsage to be performed on exit to the state defined by the StateDefinition . It is the owned ActionUsage related to the StateUsage by a StateSubactionMembership with kind = exit .
oslc_sysmlv2:stateUsage_IsParallel	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the nestedStates of this StateUsage are to all be performed in parallel. If true, none of the nestedActions (which include nestedStates) may have any incoming or outgoing Transitions . If false, only one nestedState may be performed at a time.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:stateUsage_StateDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this StateUsage . Nominally, these would be StateDefinitions , but kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage, if isVariation = true. If isVariation = false, then there must be no variants.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships. If isVariation = true, then this must be all memberships of the Usage. If isVariation = false, then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-121].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#BindingConnectorAsUsage>
- **Summary:** BindingConnectorAsUsageShape
- **Description:** A BindingConnectorAsUsage is both a BindingConnector and a ConnectorAsUsage.

BindingConnectorAsUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement, if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The TextualRepresentations that annotate this Element .
<code>oslc_sysmlv2:feature_ChainingFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
<code>oslc_sysmlv2:feature_Direction</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:FeatureDirectionKind</code>	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
<code>oslc_sysmlv2:feature_EndOwningType</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:namespace_OwnedMember</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
<code>oslc_sysmlv2:namespace_OwnedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElement of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements to which this Relationship is considered to be directed.
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage.
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage, if isVariation = true. If isVariation = false, then there must be no variants.
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships. If isVariation = true, then this must be all memberships of the Usage. If isVariation = false, then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-122].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#InterfaceDefinition>
- **Summary:** InterfaceDefinitionShape
- **Description:** An InterfaceDefinition is a ConnectionDefinition all of whose ends are PortUsages, defining an interface between elements that interact through such ports.

InterfaceDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:association_AssociationEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of the Association that identify the things that can be related by it. A concrete Association must have at least two associationEnds . When it has exactly two, the Association is called a <i>binary Association</i> .
oslc_sysmlv2:association_RelatedType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The types of the associationEnds of the Association , which are the relatedElements of the Association considered as a Relationship .
oslc_sysmlv2:association_SourceType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The source relatedType for this Association . It is the first relatedType of the Association .
oslc_sysmlv2:association_TargetType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The target relatedTypes for this Association . This includes all the relatedTypes other than the sourceType .
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:connectionDefinition_ConnectionEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that define the things related by the ConnectionDefinition .
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships .
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .

oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:interfaceDefinition_InterfaceEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are the connectionEnds of this InterfaceDefinition. .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace.
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace, which are the memberElements of all memberships of the Namespace.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-123].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#MetadataUsage>
- **Summary:** MetadataUsageShape
- **Description:** A **MetadataUsage** is a **Usage** and a **MetadataFeature**, used to annotate other **Elements** in a system model with metadata. As a **MetadataFeature**, its type must be a **Metaclass**, which will nominally be a **MetadataDefinition**. However, any kernel **Metaclass** is also allowed, to permit use of **Metaclasses** from the Kernel Model Libraries.

MetadataUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:annotatingElement_AnnotatedElement	One-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are annotated by this AnnotatingElement . If annotation is not empty, these are the annotatedElements of the annotations . If annotation is empty, then it is the owningNamespace of the AnnotatingElement .
oslc_sysmlv2:annotatingElement_Annotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The Annotations that relate this AnnotatingElement to its annotatedElements .
oslc_sysmlv2:annotatingElement_OwnedAnnotatingRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this AnnotatingElement that are Annotations , for which this AnnotatingElement is the annotatingElement .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature, derived from the chainingFeatures of the ownedFeatureChainings of this Feature, in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature.
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage. Nominally, these are ItemDefinitions, but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.
oslc_sysmlv2:metadataFeature_Metaclass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Metaclass	The type of this MetadataFeature , which must be a Metaclass .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:metadataUsage_MetadataDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Metaclass	The MetadataDefinition that is the definition of this MetadataUsage .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The usages of this Usage that are directedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is a referential Usage , that is, it has <code>isComposite = false</code> .
<code>oslc_sysmlv2:usage_IsVariation</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
<code>oslc_sysmlv2:usage_NestedAction</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ActionUsage</code>	The ActionUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAllocation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AllocationUsage</code>	The AllocationUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAnalysisCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AnalysisCaseUsage</code>	The AnalysisCaseUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAttribute</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AttributeUsage</code>	The code>AttributeUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedCalculation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CalculationUsage</code>	The CalculationUsage that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CaseUsage</code>	The CaseUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The ConcernUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedConnection</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConnectorAsUsage</code>	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
<code>oslc_sysmlv2:usage_NestedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The ConstraintUsages that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_NestedEnumeration</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:EnumerationUsage</code>	The code>EnumerationUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedFlow</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FlowConnectionUsage</code>	The code>FlowConnectionUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedInterface</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:InterfaceUsage</code>	The InterfaceUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedItem</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ItemUsage</code>	The ItemUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedMetadata</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:MetadataUsage</code>	The MetadataUsages that are nestedUsages of this of this Usage .
<code>oslc_sysmlv2:usage_NestedOccurrence</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:OccurrenceUsage</code>	The OccurrenceUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedPart</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The PartUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedPort</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PortUsage</code>	The PortUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedReference</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ReferenceUsage</code>	The ReferenceUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedRendering</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:RenderingUsage</code>	The RenderingUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedRequirement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:RequirementUsage</code>	The RequirementUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships. If isVariation = true, then this must be all memberships of the Usage. If isVariation = false, then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-124].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ItemFlow>
- **Summary:** ItemFlowShape
- **Description:** An ItemFlow is a Step that represents the transfer of objects or data values from one Feature to another. ItemFlows can take non-zero time to complete.

ItemFlow Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:itemFlow_Interaction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Interaction	The Interactions that type this ItemFlow . Interactions are both Associations and Behaviors , which can type Connectors and Steps , respectively.
oslc_sysmlv2:itemFlow_ItemFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ItemFeature	The ownedFeature of the ItemFlow that is an ItemFeature (if any).
oslc_sysmlv2:itemFlow_ItemFlowEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemFlowEnd	The connectorEnds of this ItemFlow that are ItemFlowEnds .
oslc_sysmlv2:itemFlow_ItemType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The type of values transferred, which is the type of the itemFeature of the ItemFlow .
oslc_sysmlv2:itemFlow_SourceOutputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that provides the items carried by the ItemFlow . It must be an owned output of the source of the ItemFlow .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:itemFlow_TargetInputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that receives the values carried by the ItemFlow . It must be an owned output of the target participant of the ItemFlow .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Disjoinings</code> , for which the <code>Type</code> is the <code>typeDisjoined</code> <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>endFeatures</code> of this <code>Type</code> that are <code>ownedFeatures</code> .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific</code> <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-125] .
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#FeatureChaining`
- **Summary:** FeatureChainingShape
- **Description:** FeatureChaining is a Relationship that makes its target Feature one of the chainingFeatures of its owning Feature.

FeatureChaining Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featureChaining_ChainingFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature whose values partly determine values of featureChained , as described in Feature::chainingFeature .
oslc_sysmlv2:featureChaining_FeatureChained	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature whose values are partly determined by values of the chainingFeature , as described in Feature::chainingFeature .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-126].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** http://open-services.net/ns/sysmlv2#Differencing
- **Summary:** DifferencingShape
- **Description:** Differencing is a Relationship that makes its differencingType one of the differencingTypes of its typeDifferenced.

Differencing Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the <code>ownedRelationships</code> of this Element. This property may be true, even if there are not actually any <code>ownedRelationships</code> with <code>isImplied = true</code> , meaning that no such Relationships are actually implied for this Element. However, if it is false, then <code>ownedRelationships</code> may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the <code>declaredName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>name</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The <code>ownedRelationships</code> of this <code>Element</code> that are <code>Annotations</code> , for which this <code>Element</code> is the <code>annotatedElement</code> .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the <code>ownedRelatedElements</code> of the <code>ownedRelationships</code> of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-127].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#SuccessionItemFlow`
- **Summary:** SuccessionItemFlowShape
- **Description:** A `SuccessionItemFlow` is an `ItemFlow` that also provides temporal ordering. It classifies *Transfers* that cannot start until the source *Occurrence* has completed and that must complete before the target *Occurrence* can start.

SuccessionItemFlow Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:itemFlow_Interaction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Interaction	The Interactions that type this ItemFlow . Interactions are both Associations and Behaviors , which can type Connectors and Steps , respectively.
oslc_sysmlv2:itemFlow_ItemFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ItemFeature	The ownedFeature of the ItemFlow that is an ItemFeature (if any).
oslc_sysmlv2:itemFlow_ItemFlowEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemFlowEnd	The connectorEnds of this ItemFlow that are ItemFlowEnds .
oslc_sysmlv2:itemFlow_ItemType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The type of values transferred, which is the type of the itemFeature of the ItemFlow .
oslc_sysmlv2:itemFlow_SourceOutputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that provides the items carried by the ItemFlow . It must be an owned output of the source of the ItemFlow .
oslc_sysmlv2:itemFlow_TargetInputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that receives the values carried by the ItemFlow . It must be an owned output of the target participant of the ItemFlow .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:step_Parameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
<code>oslc_sysmlv2:succession_EffectStep</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Step</code>	Steps that represent occurrences that are side effects of the transitionStep occurring.
<code>oslc_sysmlv2:succession_GuardExpression</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Expression</code>	Expressions that must evaluate to true before the transitionStep can occur.
<code>oslc_sysmlv2:succession_TransitionStep</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Step</code>	A Step that is typed by the Behavior TransitionPerformances::TransitionPerformance (from the Kernel Semantic Library) that has this Succession as its transitionLink .
<code>oslc_sysmlv2:succession_TriggerStep</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Step</code>	Steps that map incoming events to the timing of occurrences of the transitionStep . The values of triggerStep subset the list of acceptable events to be received by a Behavior or the object that performs it.
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features of this Type with isEnd = true .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-128].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#MultiplicityRange`
- **Summary:** MultiplicityRangeShape
- **Description:** A **MultiplicityRange** is a **Multiplicity** whose value is defined to be the (inclusive) range of natural numbers given by the result of a **lowerBound Expression** and the result of an **upperBound Expression**. The result of these **Expressions** shall be of type **Natural**. If the result of the **upperBound Expression** is the unbounded value *****, then the specified range includes all natural numbers greater than or equal to the **lowerBound** value. If no **lowerBound Expression**, then the default is that the lower bound has the same value as the upper bound, except if the **upperBound** evaluates to *****, in which case the default for the lower bound is 0.

MultiplicityRange Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>jazz_am:trace</code>	Zero-or-many	false	Resource	Reference	<code>oslc:Any</code>	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
<code>oslc_sysmlv2:element_AliasIds</code>	Zero-or-many	false	unspecified	Either	<code>xsd:string</code>	Various alternative identifiers for this Element. Generally, these will be set by tools.
<code>oslc_sysmlv2:element_DeclaredName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The declared name of this Element .
<code>oslc_sysmlv2:element_DeclaredShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
<code>oslc_sysmlv2:element_Documentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Documentation</code>	The Documentation owned by this Element.
<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:multiplicityRange_Bound	One-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The owned Expressions of the MultiplicityRange whose results provide its bounds. These must be the only ownedMembers of the MultiplicityRange .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:multiplicityRange_LowerBound	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Expression	The Expression whose result provides the lower bound of the MultiplicityRange . If no lowerBound Expression is given, then the lower bound shall have the same value as the upper bound, unless the upper bound is unbounded (*), in which case the lower bound shall be 0.
oslc_sysmlv2:multiplicityRange_UpperBound	Exactly-one	false	Resource	Either	oslc_sysmlv2:Expression	The Expression whose result is the upper bound of the MultiplicityRange .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:feature_OwnedTypeFeaturing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TypeFeaturing</code>	The <code>ownedRelationships</code> of this <code>Feature</code> that are <code>TypeFeaturings</code> and for which the <code>Feature</code> is the <code>featureOfType</code> .
<code>oslc_sysmlv2:feature_OwnedTyping</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureTyping</code>	The <code>ownedSpecializations</code> of this <code>Feature</code> that are <code>FeatureTypings</code> , for which the <code>Feature</code> is the <code>typedFeature</code> .
<code>oslc_sysmlv2:feature_OwningFeatureMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>FeatureMembership</code> that owns this <code>Feature</code> as an <code>ownedMemberFeature</code> , determining its <code>owningType</code> .
<code>oslc_sysmlv2:feature_OwningType</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The <code>Type</code> that is the <code>owningType</code> of the <code>owningFeatureMembership</code> of this <code>Feature</code> .
<code>oslc_sysmlv2:feature_Type</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	<code>Types</code> that restrict the values of this <code>Feature</code> , such that the values must be instances of all the <code>types</code> . The types of a <code>Feature</code> are derived from its <code>typings</code> and the <code>types</code> of its <code>subsettings</code> . If the <code>Feature</code> is chained, then the <code>types</code> of the last <code>Feature</code> in the chain are also <code>types</code> of the chained <code>Feature</code> .
<code>oslc_sysmlv2:namespace_ImportedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The <code>Memberships</code> in this <code>Namespace</code> that result from the <code>ownedImports</code> of this <code>Namespace</code> .
<code>oslc_sysmlv2:namespace_Member</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The set of all member <code>Elements</code> of this <code>Namespace</code> , which are the <code>memberElements</code> of all <code>memberships</code> of the <code>Namespace</code> .
<code>oslc_sysmlv2:namespace_Membership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All <code>Memberships</code> in this <code>Namespace</code> , including (at least) the union of <code>ownedMemberships</code> and <code>importedMemberships</code> .
<code>oslc_sysmlv2:namespace_OwnedImport</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Import</code>	The <code>ownedRelationships</code> of this <code>Namespace</code> that are <code>Imports</code> , for which the <code>Namespace</code> is the <code>importOwningNamespace</code> .
<code>oslc_sysmlv2:namespace_OwnedMember</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owned <code>members</code> of this <code>Namespace</code> , which are the <code>ownedMemberElements</code> of the <code>ownedMemberships</code> of the ..
<code>oslc_sysmlv2:namespace_OwnedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The <code>ownedRelationships</code> of this <code>Namespace</code> that are <code>Memberships</code> , for which the <code>Namespace</code> is the <code>membershipOwningNamespace</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:step_Behavior</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Behavior</code>	The Behaviors that type this Step .
<code>oslc_sysmlv2:step_Parameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features of this Type with isEnd = true .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the featureMemberships of this Type .
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout..
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout..
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>endFeatures</code> of this <code>Type</code> that are <code>ownedFeatures</code> .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-130].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#InterfaceUsage>
- **Summary:** InterfaceUsageShape
- **Description:** An **InterfaceUsage** is a Usage of an **InterfaceDefinition** to represent an interface connecting parts of a system through specific ports.

InterfaceUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:connectionUsage_ConnectionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AssociationStructure	The AssociationStructures that are the types of this ConnectionUsage . Nominally, these are , but other kinds of Kernel AssociationStructures are also allowed, to permit use of AssociationStructures from the Kernel Model Libraries.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:interfaceUsage_InterfaceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceDefinition	The InterfaceDefinitions that type this InterfaceUsage .
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage. Nominally, these are ItemDefinitions, but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:namespace_OwnedMember</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
<code>oslc_sysmlv2:namespace_OwnedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
<code>oslc_sysmlv2:occurrenceUsage_IndividualDefinition</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OccurrenceDefinition</code>	The at most one occurrenceDefinition that has isIndividual = true .
<code>oslc_sysmlv2:occurrenceUsage_IsIndividual</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
<code>oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Class</code>	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
<code>oslc_sysmlv2:occurrenceUsage_PortionKind</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:PortionKind</code>	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
<code>oslc_sysmlv2:partUsage_PartDefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartDefinition</code>	The itemDefinitions of this PartUsage that are PartDefinitions.
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElement of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements from which this Relationship is considered to be directed..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-131].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#PerformActionUsage>
- **Summary:** PerformActionUsageShape
- **Description:** A **PerformActionUsage** is an **ActionUsage** that represents the performance of an **ActionUsage**. Unless it is the **PerformActionUsage** itself, the **ActionUsage** to be performed is related to the **PerformActionUsage** by a **ReferenceSubsetting** relationship. A **PerformActionUsage** is also an **EventOccurrenceUsage**, with its **performedAction** as the **eventOccurrence**.

PerformActionUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:eventOccurrenceUsage_EventOccurrence	Exactly-one	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsage referenced as an event by this EventOccurrenceUsage . It is the referenceFeature of the ownedReferenceSubsetting for the EventOccurrenceUsage , if there is one, and, otherwise, the EventOccurrenceUsage itself.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings, for which the Feature is the typedFeature.
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature, determining its owningType.
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature.
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature, such that the values must be instances of all the types. The types of a Feature are derived from its typings and the types of its subsettings. If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace.
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace, which are the memberElements of all memberships of the Namespace.
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace, including (at least) the union of ownedMemberships and importedMemberships.
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports, for which the Namespace is the importOwningNamespace.
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace, which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships, for which the Namespace is the membershipOwningNamespace.
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true.
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:performActionUsage_PerformedAction	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage to be performed by this PerformedActionUsage . It is the eventOccurrence of the PerformActionUsage considered as an EventOccurrenceUsage , which must be an ActionUsage .
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type.
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type, which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does not include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships.
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation. These are included in the derived union for the memberships of the Type.
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes, which are the Types derived from the intersectingType of the ownedIntersectings of this Type. For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types.
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator.
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage, if isVariation = true. If isVariation = false, then there must be no variants.
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships. If isVariation = true, then this must be all memberships of the Usage. If isVariation = false, then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-132].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#TransitionUsage>
- **Summary:** TransitionUsageShape
- **Description:** A TransitionUsage is an ActionUsage representing a triggered transition between ActionUsages or StateUsages. When triggered by a triggerAction, when its guardExpression is true, the TransitionUsage asserts that its source is exited, then its effectAction (if any) is performed, and then its target is entered.

TransitionUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:transitionUsage_EffectAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that define the effects of this TransitionUsage , which are the ownedFeatures of the TransitionUsage related to it by TransitionFeatureMemberships with kind = effect , which must all be ActionUsages .
oslc_sysmlv2:transitionUsage_GuardExpression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that define the guards of this TransitionUsage , which are the ownedFeatures of the TransitionUsage related to it by TransitionFeatureMemberships with kind = guard , which must all be Expressions .
oslc_sysmlv2:transitionUsage_Source	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The source ActionUsage of this TransitionUsage , which becomes the source of the succession for the TransitionUsage .
oslc_sysmlv2:transitionUsage_Succession	Exactly-one	false	Resource	Either	oslc_sysmlv2:Succession	The Succession that is the ownedFeature of this TransitionUsage , which, if the TransitionUsage is triggered, asserts the temporal ordering of the source and target .
oslc_sysmlv2:transitionUsage_Target	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The target ActionUsage of this TransitionUsage , which is the targetFeature of the succession for the TransitionUsage ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:transitionUsage_TriggerAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AcceptActionUsage	The AcceptActionUsages that define the triggers of this TransitionUsage , which are the ownedFeatures of the TransitionUsage related to it by TransitionFeatureMemberships with kind = trigger , which must all be AcceptActionUsages .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>endFeatures</code> of this <code>Type</code> that are <code>ownedFeatures</code> .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The <code>Classifiers</code> that are the types of this <code>Usage</code> . Nominally, these are <code>Definitions</code> , but other kinds of Kernel <code>Classifiers</code> are also allowed, to permit use of <code>Classifiers</code> from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The <code>usages</code> of this <code>Usage</code> that are <code>directedFeatures</code> .
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this <code>Usage</code> is a referential <code>Usage</code> , that is, it has <code>isComposite = false</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .

Standards Track Work Product

oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-133].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#VerificationCaseUsage`
- **Summary:** VerificationCaseUsageShape
- **Description:** A `VerificationCaseUsage` is a Usage of a `VerificationCaseDefinition`.

VerificationCaseUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:calculationUsage_CalculationDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that is the type of this CalculationUsage. Nominally, this would be a CalculationDefinition, but a kernel Function is also allowed, to permit use of Functions from the Kernel Model Libraries..
oslc_sysmlv2:caseUsage_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this CaseUsage that represent actors involved in the case.
oslc_sysmlv2:caseUsage_CaseDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:CaseDefinition	The CaseDefinition that is the type of this CaseUsage.
oslc_sysmlv2:caseUsage_ObjectiveRequirement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage representing the objective of this CaseUsage.
oslc_sysmlv2:caseUsage_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this CaseUsage that represents its subject.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The usages of this Usage that are directedFeatures .
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is a referential Usage , that is, it has isComposite = false .
<code>oslc_sysmlv2:usage_IsVariation</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
<code>oslc_sysmlv2:usage_NestedAction</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ActionUsage</code>	The ActionUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAllocation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AllocationUsage</code>	The AllocationUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAnalysisCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AnalysisCaseUsage</code>	The AnalysisCaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_NestedAttribute</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AttributeUsage</code>	The code>AttributeUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedCalculation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CalculationUsage</code>	The CalculationUsage that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CaseUsage</code>	The CaseUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The ConcernUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedConnection</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConnectorAsUsage</code>	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
<code>oslc_sysmlv2:usage_NestedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The ConstraintUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedEnumeration</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:EnumerationUsage</code>	The code>EnumerationUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedFlow</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FlowConnectionUsage</code>	The code>FlowConnectionUsages that are nestedUsages of this Usage.
<code>oslc_sysmlv2:usage_NestedInterface</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:InterfaceUsage</code>	The InterfaceUsages that are nestedUsages of this Usage.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_NestedItem</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ItemUsage</code>	The ItemUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedMetadata</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:MetadataUsage</code>	The MetadataUsages that are nestedUsages of this of this Usage .
<code>oslc_sysmlv2:usage_NestedOccurrence</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:OccurrenceUsage</code>	The OccurrenceUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedPart</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The PartUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc_sysmlv2:verificationCaseUsage_VerificationCaseDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:VerificationCaseDefinition	The VerificationCase that is the definition of this VerificationCaseUsage .
oslc_sysmlv2:verificationCaseUsage_VerifiedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages verified by this VerificationCaseUsage , which are the verifiedRequirements of all RequirementVerificationMemberships of the objectiveRequirement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-134].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#PortDefinition>
- **Summary:** PortDefinitionShape
- **Description:** A **PortDefinition** defines a point at which external entities can connect to and interact with a system or part of a system. Any **ownedUsages** of a **PortDefinition**, other than **PortUsages**, must not be composite.

PortDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:portDefinition_ConjugatedPortDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ConjugatedPortDefinition	The that is conjugate to this PortDefinition ..
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout ..
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout ..
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-135].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#LiteralInteger`
- **Summary:** LiteralIntegerShape
- **Description:** A **LiteralInteger** is a **LiteralExpression** that provides an **Integer** value as a result. Its **result parameter** must have the type **Integer**.

LiteralInteger Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:literalInteger_Value	Exactly-one	false	unspecified	Either	xsd:integer	The Integer value that is the result of evaluating this LiteralInteger .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-136].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ViewpointDefinition>
- **Summary:** ViewpointDefinitionShape
- **Description:** A **ViewpointDefinition** is a **RequirementDefinition** that specifies one or more stakeholder concerns that are to be satisfied by creating a view of a model.

ViewpointDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior, which are defined as its directedFeatures, whose values are passed into and/or out of a performance of the Behavior.
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior.
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:function_Expression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that are steps in the calculation of the result of this Function .
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:requirementDefinition_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this RequirementDefinition that represent actors involved in the requirement.
oslc_sysmlv2:requirementDefinition_AssumedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The owned ConstraintUsages that represent assumptions of this RequirementDefinition , which are the ownedConstraints of the RequirementConstraintMemberships of the RequirementDefinition with kind = assumption .
oslc_sysmlv2:requirementDefinition_FramedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages framed by this RequirementDefinition , which are the ownedConcerns of all FramedConcernMemberships of the RequirementDefinition .
oslc_sysmlv2:requirementDefinition_ReqId	Zero-or-one	false	unspecified	Either	xsd:string	An optional modeler-specified identifier for this RequirementDefinition (used, e.g., to link it to an original requirement text in some source document), which is the declaredShortName for the RequirementDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:requirementDefinition_RequiredConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The owned ConstraintUsages that represent requirements of this RequirementDefinition , derived as the ownedConstraints of the RequirementConstraintMemberships of the RequirementDefinition with kind = requirement .
oslc_sysmlv2:requirementDefinition_StakeholderParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this RequirementDefinition that represent stakeholders for th requirement.
oslc_sysmlv2:requirementDefinition_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this RequirementDefinition that represents its subject.
oslc_sysmlv2:requirementDefinition_Text	Zero-or-many	false	unspecified	Either	xsd:string	An optional textual statement of the requirement represented by this RequirementDefinition , derived from the bodies of the documentation of the RequirementDefinition .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:viewpointDefinition_ViewpointStakeholder</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The PartUsages that identify the stakeholders with concerns framed by this ViewpointDefinition , which are the owned and inherited stakeholderParameters of the framedConcerns of this ViewpointDefinition .
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-137].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#LoopActionUsage>

- **Summary:** LoopActionUsageShape
- **Description:** A **LoopActionUsage** is an **ActionUsage** that specifies that its **bodyAction** should be performed repeatedly. Its subclasses **WhileLoopActionUsage** and **ForLoopActionUsage** provide different ways to determine how many times the **bodyAction** should be performed.

LoopActionUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:loopActionUsage_BodyAction	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage to be performed repeatedly by the LoopActionUsage . It is the second parameter of the LoopActionUsage .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features of this Type with isEnd = true .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the featureMemberships of this Type .
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-138].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#MembershipExpose`
- **Summary:** MembershipExposeShape
- **Description:** A `MembershipExpose` is an `Expose` that exposes a specific `importedMembership` and, if `isRecursive = true`, additional `Memberships` recursively..

MembershipExpose Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:import_ImportedElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The effectively imported Element for this Import. For a MembershipImport , this is the memberElement of the importedMembership . For a NamespaceImport , it is the importedNamespace .
oslc_sysmlv2:import_ImportOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace into which Memberships are imported by this Import, which must be the owningRelatedElement of the Import.
oslc_sysmlv2:import_IsImportAll	Exactly-one	false	unspecified	Either	xsd:boolean	Whether to import memberships without regard to declared visibility.
oslc_sysmlv2:import_IsRecursive	Exactly-one	false	unspecified	Either	xsd:boolean	Whether to recursively import Memberships from visible, owned sub-Namespace.
oslc_sysmlv2:import_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	The visibility level of the imported members from this Import relative to the importOwningNamespace .
oslc_sysmlv2:membershipImport_ImportedMembership	Exactly-one	false	Resource	Either	oslc_sysmlv2:Membership	The Membership to be imported.
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-139].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ActorMembership>
- **Summary:** ActorMembershipShape
- **Description:** An **ActorMembership** is a **ParameterMembership** that identifies a **PartUsage** as an *actor* **parameter**, which specifies a role played by an external entity in interaction with the **owningType** of the **ActorMembership**.

ActorMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actorMembership_OwnedActorParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsage specifying the actor.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType , making it an ownedFeature of the owningType .
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:parameterMembership_OwnedMemberParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is identified as a parameter by this ParameterMembership .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-140].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ViewRenderingMembership>
- **Summary:** ViewRenderingMembershipShape
- **Description:** A **ViewRenderingMembership** is a FeatureMembership that identifies the **viewRendering** of a **ViewDefinition** or **ViewUsage**..

ViewRenderingMembership Properties

oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> to which this Relationship is considered to be directed.
<code>oslc_sysmlv2:viewRenderingMembership_OwnedRendering</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:RenderingUsage</code>	The owned <code>RenderingUsage</code> that is either itself the <code>referencedRendering</code> or subsets the <code>referencedRendering</code> .
<code>oslc_sysmlv2:viewRenderingMembership_ReferencedRendering</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:RenderingUsage</code>	The <code>RenderingUsage</code> that is referenced through this <code>ViewRenderingMembership</code> . It is the <code>referencedFeature</code> of the <code>ownedReferenceSubsetting</code> for the <code>ownedRendering</code> , if there is one, and, otherwise, the <code>ownedRendering</code> itself.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-141].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Import`
- **Summary:** ImportShape
- **Description:** An **Import** is an **Relationship** between its **importOwningNamespace** and either a **Membership** (for a **MembershipImport**) or another **Namespace** (for a **NamespaceImport**), which determines a set of **Memberships** that become **importedMemberships** of the **importOwningNamespace**. If **isImportAll** = **false** (the default), then only public **Memberships** are considered "visible". If **isImportAll** = **true**, then all **Memberships** are considered "visible", regardless of their declared **visibility**. If **isRecursive** = **true**, then visible **Memberships** are also recursively imported from owned sub-**Namespaces**.

Import Properties

dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:import_ImportedElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The effectively imported Element for this Import. For a MembershipImport , this is the memberElement of the importedMembership . For a NamespaceImport , it is the importedNamespace .
oslc_sysmlv2:import_ImportOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace into which Memberships are imported by this Import, which must be the owningRelatedElement of the Import.
oslc_sysmlv2:import_IsImportAll	Exactly-one	false	unspecified	Either	xsd:boolean	Whether to import memberships without regard to declared visibility.
oslc_sysmlv2:import_IsRecursive	Exactly-one	false	unspecified	Either	xsd:boolean	Whether to recursively import Memberships from visible, owned sub-Namespaces.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:import_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	The visibility level of the imported members from this Import relative to the importOwningNamespace .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-142].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Behavior>
- **Summary:** BehaviorShape
- **Description:** A **Behavior** coordinates occurrences of other **Behaviors**, as well as changes in objects. **Behaviors** can be decomposed into **Steps** and be characterized by **parameters**.

Behavior Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
<code>dcterms:source</code>	Zero-or-one	false	Resource	Reference	<code>oslc:Any</code>	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
<code>dcterms:title</code>	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
<code>dcterms:type</code>	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
<code>jazz_am:derives</code>	Zero-or-many	false	Resource	Reference	<code>oslc:Any</code>	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior, which are defined as its directedFeatures, whose values are passed into and/or out of a performance of the Behavior.
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior.
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-143].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Expose>
- **Summary:** ExposeShape
- **Description:** An **Expose** is an **Import** of **Memberships** into a **ViewUsage** that provide the **Elements** to be included in a view. Visibility is always ignored for an **Expose** (i.e., **isImportAll** = **true**).

Expose Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:import_ImportedElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The effectively imported Element for this Import. For a MembershipImport , this is the memberElement of the importedMembership . For a NamespaceImport , it is the importedNamespace .
oslc_sysmlv2:import_ImportOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace into which Memberships are imported by this Import, which must be the owningRelatedElement of the Import.
oslc_sysmlv2:import_IsImportAll	Exactly-one	false	unspecified	Either	xsd:boolean	Whether to import memberships without regard to declared visibility.
oslc_sysmlv2:import_IsRecursive	Exactly-one	false	unspecified	Either	xsd:boolean	Whether to recursively import Memberships from visible, owned sub-Namespaces.
oslc_sysmlv2:import_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	The visibility level of the imported members from this Import relative to the importOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> to which this Relationship is considered to be directed.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-144].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#RequirementUsage`

- **Summary:** RequirementUsageShape
- **Description:** A RequirementUsage is a Usage of a RequirementDefinition.

RequirementUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:booleanExpression_Predicate	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The Predicate that types this BooleanExpression .
oslc_sysmlv2:constraintUsage_ConstraintDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The (single) Predicate that is the type of this ConstraintUsage . Nominally, this will be a ConstraintDefinition , but other kinds of Predicates are also allowed, to permit use of Predicates from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:requirementUsage_ActorParameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The parameters of this RequirementUsage that represent actors involved in the requirement.
<code>oslc_sysmlv2:requirementUsage_AssumedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The owned ConstraintUsages that represent assumptions of this RequirementUsage , derived as the ownedConstraints of the RequirementConstraintMemberships of the RequirementUsage with kind = assumption .
<code>oslc_sysmlv2:requirementUsage_FramedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The ConcernUsages framed by this RequirementUsage , which are the ownedConcerns of all FramedConcernMemberships of the RequirementUsage .
<code>oslc_sysmlv2:requirementUsage_ReqId</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional modeler-specified identifier for this RequirementUsage (used, e.g., to link it to an original requirement text in some source document), which is the declaredShortName for the RequirementUsage .
<code>oslc_sysmlv2:requirementUsage_RequiredConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The owned ConstraintUsages that represent requirements of this RequirementUsage , which are the ownedConstraints of the RequirementConstraintMemberships of the RequirementUsage with kind = requirement .
<code>oslc_sysmlv2:requirementUsage_RequirementDefinition</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:RequirementDefinition</code>	The RequirementDefinition that is the single definition of this RequirementUsage .
<code>oslc_sysmlv2:requirementUsage_StakeholderParameter</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartUsage</code>	The parameters of this RequirementUsage that represent stakeholders for the requirement.
<code>oslc_sysmlv2:requirementUsage_SubjectParameter</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The parameter of this RequirementUsage that represents its subject.
<code>oslc_sysmlv2:requirementUsage_Text</code>	Zero-or-many	false	unspecified	Either	<code>xsd:string</code>	An optional textual statement of the requirement represented by this RequirementUsage , derived from the bodies of the documentation of the RequirementUsage..
<code>oslc_sysmlv2:step_Behavior</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Behavior</code>	The Behaviors that type this Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .

oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage, if isVariation = true. If isVariation = false, then there must be no variants.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-145] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#CaseUsage>
- **Summary:** CaseUsageShape
- **Description:** A **CaseUsage** is a **Usage** of a **CaseDefinition**.

CaseUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:calculationUsage_CalculationDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that is the type of this CalculationUsage. Nominally, this would be a CalculationDefinition, but a kernel Function is also allowed, to permit use of Functions from the Kernel Model Libraries..
oslc_sysmlv2:caseUsage_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this CaseUsage that represent actors involved in the case.
oslc_sysmlv2:caseUsage_CaseDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:CaseDefinition	The CaseDefinition that is the type of this CaseUsage.
oslc_sysmlv2:caseUsage_ObjectiveRequirement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage representing the objective of this CaseUsage.
oslc_sysmlv2:caseUsage_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this CaseUsage that represents its subject.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression.
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at model level, that is, using metadata within the model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:feature_IsPortion</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
<code>oslc_sysmlv2:feature_IsReadOnly</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether the values of this Feature can change over the lifetime of an instance of the domain.
<code>oslc_sysmlv2:feature_IsUnique</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether or not values for this Feature must have no duplicates or not.
<code>oslc_sysmlv2:feature_OwnedFeatureChaining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureChaining</code>	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
<code>oslc_sysmlv2:feature_OwnedFeatureInverting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureInverting</code>	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
<code>oslc_sysmlv2:feature_OwnedRedefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Redefinition</code>	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
<code>oslc_sysmlv2:feature_OwnedReferenceSubsetting</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:ReferenceSubsetting</code>	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
<code>oslc_sysmlv2:feature_OwnedSubsetting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Subsetting</code>	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
<code>oslc_sysmlv2:feature_OwnedTypeFeaturing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TypeFeaturing</code>	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
<code>oslc_sysmlv2:feature_OwnedTyping</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureTyping</code>	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
<code>oslc_sysmlv2:feature_OwningFeatureMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
<code>oslc_sysmlv2:feature_OwningType</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The Type that is the owningType of the owningFeatureMembership of this Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step.
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step, which are defined as its directedFeatures, whose values are passed into and/or out of a performance of the Step.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types, but not including those of the remaining Types. For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction.
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true.
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type.
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type, which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does not include any importedMemberships).

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-146] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#OwningMembership>
- **Summary:** OwningMembershipShape
- **Description:** An **OwningMembership** is a **Membership** that owns its **memberElement** as a **ownedRelatedElement**. The **ownedMemberElement** becomes an **ownedMember** of the **membershipOwningNamespace**.

OwningMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement.
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-147].

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URLs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Function>
- **Summary:** FunctionShape
- **Description:** A **Function** is a **Behavior** that has an **out parameter** that is identified as its **result**. A **Function** represents the performance of a calculation that produces the values of its **result parameter**. This calculation may be decomposed into **Expressions** that are **steps** of the **Function**.

Function Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.

oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:function_Expression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that are steps in the calculation of the result of this Function .
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type.
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type, which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does not include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships.
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation. These are included in the derived union for the memberships of the Type.
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes, which are the Types derived from the intersectingType of the ownedIntersectings of this Type. For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types.
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator.
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-148].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Redefinition`
- **Summary:** RedefinitionShape
- **Description:** **Redefinition** is a kind of **Subsetting** that requires the **redefinedFeature** and the **redefiningFeature** to have the same values (on each instance of the domain of the **redefiningFeature**). This means any restrictions on the **redefiningFeature**, such as **type** or **multiplicity**, also apply to the **redefinedFeature** (on each instance of the domain of the **redefiningFeature**), and vice versa. The **redefinedFeature** might have values for instances of the domain of the **redefiningFeature**, but only as instances of the domain of the **redefinedFeature** that happen to also be instances of the domain of the **redefiningFeature**. This is supported by the constraints inherited from **Subsetting** on the domains of the **redefiningFeature** and **redefinedFeature**. However, these constraints are narrowed for **Redefinition** to require the **owningTypes** of the **redefiningFeature** and **redefinedFeature** to be different and the **redefinedFeature** to not be inherited into the **owningNamespace** of the **redefiningFeature**. This enables the **redefiningFeature** to have the same name as the **redefinedFeature**, if desired.

Redefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:redefinition_RedefinedFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is redefined by the redefiningFeature of this Redefinition .
oslc_sysmlv2:redefinition_RedefiningFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is redefining the redefinedFeature of this Redefinition .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:specialization_General	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	A Type with a superset of all instances of the specific Type , which might be the same set.
oslc_sysmlv2:specialization_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the specific Type of this Specialization and owns it as its owningRelatedElement .
oslc_sysmlv2:specialization_Specific	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	A Type with a subset of all instances of the general Type , which might be the same set.
oslc_sysmlv2:subsetting_OwningFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	A subsettingFeature that is also the owningRelatedElement of this Subsetting .
oslc_sysmlv2:subsetting_SubsettedFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is subsetted by the subsettingFeature of this Subsetting .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:subsetting_SubsettingFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is a subset of the subsettingFeature of this Subsetting .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-149].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#AnalysisCaseDefinition>
- **Summary:** AnalysisCaseDefinitionShape
- **Description:** An **AnalysisCaseDefinition** is a **CaseDefinition** for the case of carrying out an analysis.

AnalysisCaseDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionDefinition_Action	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are steps in this ActionDefinition , which define the actions that specify the behavior of the ActionDefinition .
oslc_sysmlv2:analysisCaseDefinition_AnalysisAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The composite actions of the AnalysisCaseDefinition that are defined as AnalysisActions .
oslc_sysmlv2:analysisCaseDefinition_ResultExpression	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Expression	An Expression used to compute the result of the AnalysisCaseDefinition , owned via a ResultExpressionMembership .
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Behavior .
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior .
oslc_sysmlv2:calculationDefinition_Calculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The actions of this CalculationDefinition that are CalculationUsages .
oslc_sysmlv2:caseDefinition_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this CaseDefinition that represent actors involved in the case.
oslc_sysmlv2:caseDefinition_ObjectiveRequirement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage representing the objective of this CaseDefinition .
oslc_sysmlv2:caseDefinition_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this CaseDefinition that represents its subject.
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships .
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description

oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the <code>owningRelatedElement</code> .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this <code>Element</code> , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this <code>Element</code> has no <code>owningNamespace</code> or if there is not a complete ownership chain of named <code>Namespace</code> s from a root <code>Namespace</code> to this <code>Element</code> .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The <code>TextualRepresentations</code> that annotate this <code>Element</code> .
<code>oslc_sysmlv2:function_Expression</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Expression</code>	The <code>Expressions</code> that are <code>steps</code> in the calculation of the <code>result</code> of this <code>Function</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The features of this Type that have a non-null direction .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features of this Type with isEnd = true .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the featureMemberships of this Type .
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-150].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Unioning`
- **Summary:** UnioningShape
- **Description:** Unioning is a Relationship that makes its unioningType one of the unioningTypes of its typeUnioned.

Unioning Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the <code>owningRelatedElement</code> of the <code>owningRelationship</code> of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The <code>owningRelationship</code> of this <code>Element</code> , if that <code>Relationship</code> is a <code>Membership</code> .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The <code>Namespace</code> that owns this <code>Element</code> , which is the <code>membershipOwningNamespace</code> of the <code>owningMembership</code> of this <code>Element</code> , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an <code>ownedRelatedElement</code> , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this <code>Element</code> , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The <code>qualifiedName</code> is null if this <code>Element</code> has no <code>owningNamespace</code> or if there is not a complete ownership chain of named <code>Namespace</code> s from a root <code>Namespace</code> to this <code>Element</code> .
<code>oslc_sysmlv2:element_ShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The short name to be used for this <code>Element</code> during name resolution within its <code>owningNamespace</code> . This is derived using the <code>effectiveShortName()</code> operation. By default, it is the same as the <code>declaredShortName</code> , but this is overridden for certain kinds of <code>Elements</code> to compute a <code>shortName</code> even when the <code>declaredName</code> is null.
<code>oslc_sysmlv2:element_TextualRepresentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TextualRepresentation</code>	The <code>TextualRepresentations</code> that annotate this <code>Element</code> .
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:unioning_TypeUnioned	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	Type with interpretations partly determined by unioningType , as described in Type::unioningType .
oslc_sysmlv2:unioning_UnioningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	Type that partly determines interpretations of typeUnioned , as described in Type::unioningType .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-151] .
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#SuccessionFlowConnectionUsage>
- **Summary:** SuccessionFlowConnectionUsageShape
- **Description:** A **SuccessionFlowConnectionUsage** is a **FlowConnectionUsage** that is also a **SuccessionItemFlow**.

SuccessionFlowConnectionUsage Properties

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage . Nominally, these would be ActionDefinitions , but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:connectionUsage_ConnectionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AssociationStructure	The AssociationStructures that are the types of this ConnectionUsage . Nominally, these are , but other kinds of Kernel AssociationStructures are also allowed, to permit use of AssociationStructures from the Kernel Model Libraries.
oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:flowConnectionUsage_FlowConnectionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Interaction	The Interactions that are the types of this FlowConnectionUsage . Nominally, these are FlowConnectionDefinitions , but other kinds of Kernel Interactions are also allowed, to permit use of Interactions from the Kernel Model Libraries.
oslc_sysmlv2:itemFlow_Interaction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Interaction	The Interactions that type this ItemFlow . Interactions are both Associations and Behaviors , which can type Connectors and Steps , respectively.
oslc_sysmlv2:itemFlow_ItemFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ItemFeature	The ownedFeature of the ItemFlow that is an ItemFeature (if any).
oslc_sysmlv2:itemFlow_ItemFlowEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemFlowEnd	The connectorEnds of this ItemFlow that are ItemFlowEnds .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:itemFlow_ItemType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The type of values transferred, which is the type of the itemFeature of the ItemFlow .
oslc_sysmlv2:itemFlow_SourceOutputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that provides the items carried by the ItemFlow . It must be an owned output of the source of the ItemFlow .
oslc_sysmlv2:itemFlow_TargetInputFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that receives the values carried by the ItemFlow . It must be an owned output of the target participant of the ItemFlow .
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage. Nominally, these are ItemDefinitions, but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:occurrenceUsage_IsIndividual</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
<code>oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Class</code>	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
<code>oslc_sysmlv2:occurrenceUsage_PortionKind</code>	Zero-or-one	false	unspecified	Either	<code>oslc_sysmlv2:PortionKind</code>	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
<code>oslc_sysmlv2:partUsage_PartDefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:PartDefinition</code>	The itemDefinitions of this PartUsage that are PartDefinitions.
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElement of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements to which this Relationship is considered to be directed.
<code>oslc_sysmlv2:step_Behavior</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Behavior</code>	The Behaviors that type this Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:succession_EffectStep	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	Steps that represent occurrences that are side effects of the transitionStep occurring.
oslc_sysmlv2:succession_GuardExpression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	Expressions that must evaluate to true before the transitionStep can occur.
oslc_sysmlv2:succession_TransitionStep	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Step	A Step that is typed by the Behavior TransitionPerformances::TransitionPerformance (from the Kernel Semantic Library) that has this Succession as its transitionLink .
oslc_sysmlv2:succession_TriggerStep	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	Steps that map incoming events to the timing of occurrences of the transitionStep . The values of triggerStep subset the list of acceptable events to be received by a Behavior or the object that performs it.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-152].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Namespace`
- **Summary:** NamespaceShape
- **Description:** A **Namespace** is an **Element** that contains other **Elements**, known as its **members**, via **Membership Relationships** with those **Elements**. The **members** of a **Namespace** may be owned by the **Namespace**, aliased in the **Namespace**, or imported into the **Namespace** via **Import Relationships**.

Namespace Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_DeclaredName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The declared name of this Element .
<code>oslc_sysmlv2:element_DeclaredShortName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
<code>oslc_sysmlv2:element_Documentation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Documentation</code>	The Documentation owned by this Element.
<code>oslc_sysmlv2:element_ElementId</code>	Exactly-one	false	unspecified	Either	<code>xsd:string</code>	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
<code>oslc_sysmlv2:element_IsImpliedIncluded</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-153].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Dependency>
- **Summary:** DependencyShape
- **Description:** A **Dependency** is a **Relationship** that indicates that one or more **client Elements** require one more **supplier Elements** for their complete specification. In general, this means that a change to one of the **supplier Elements** may necessitate a change to, or re-specification of, the **client Elements**.

oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-154].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#OccurrenceDefinition>
- **Summary:** OccurrenceDefinitionShape
- **Description:** An **OccurrenceDefinition** is a **Definition** of a **Class** of individuals that have an independent life over time and potentially an extent over space. This includes both structural things and behaviors that act on such structures.

OccurrenceDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false , the there must be no variants .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout .
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-155].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ForLoopActionUsage>
- **Summary:** ForLoopActionUsageShape
- **Description:** A **ForLoopActionUsage** is a **LoopActionUsage** that specifies that its **bodyAction ActionUsage** should be performed once for each value, in order, from the sequence of values obtained as the result of the **seqArgument Expression**, with the **loopVariable** set to the value for each iteration.

ForLoopActionUsage Properties

dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:forLoopActionUsage_LoopVariable	Exactly-one	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ownedFeature of this ForLoopActionUsage that acts as the loop variable, which is assigned the successive values of the input sequence on each iteration. It is the ownedFeature that redefines ForLoopAction::var..
oslc_sysmlv2:forLoopActionUsage_SeqArgument	Exactly-one	false	Resource	Either	oslc_sysmlv2:Expression	The Expression whose result provides the sequence of values to which the loopVariable is set for each iterative performance of the bodyAction . It is the Expression whose result is bound to the seq input parameter of this ForLoopActionUsage .
oslc_sysmlv2:loopActionUsage_BodyAction	Exactly-one	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsage to be performed repeatedly by the LoopActionUsage . It is the second parameter of the LoopActionUsage .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports, for which the Namespace is the importOwningNamespace.
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace, which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships, for which the Namespace is the membershipOwningNamespace.
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true.
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition.
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage. Nominally, these are OccurrenceDefinitions, but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage, if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step.
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step, which are defined as its directedFeatures, whose values are passed into and/or out of a performance of the Step.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>endFeatures</code> of this <code>Type</code> that are <code>ownedFeatures</code> .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The <code>Classifiers</code> that are the types of this <code>Usage</code> . Nominally, these are <code>Definitions</code> , but other kinds of Kernel <code>Classifiers</code> are also allowed, to permit use of <code>Classifiers</code> from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The <code>usages</code> of this <code>Usage</code> that are <code>directedFeatures</code> .
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this <code>Usage</code> is a referential <code>Usage</code> , that is, it has <code>isComposite = false</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-156].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#MetadataFeature>
- **Summary:** MetadataFeatureShape
- **Description:** A **MetadataFeature** is a **Feature** that is an **AnnotatingElement** used to annotate another **Element** with metadata. It is typed by a **Metaclass**. All its **ownedFeatures** must redefine **features** of its **metaclass** and any feature bindings must be model-level evaluable.

MetadataFeature Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:annotatingElement_AnnotatedElement	One-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are annotated by this AnnotatingElement . If annotation is not empty, these are the annotatedElements of the annotations . If annotation is empty, then it is the owningNamespace of the AnnotatingElement .
oslc_sysmlv2:annotatingElement_Annotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The Annotations that relate this AnnotatingElement to its annotatedElements .
oslc_sysmlv2:annotatingElement_OwnedAnnotatingRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this AnnotatingElement that are Annotations , for which this AnnotatingElement is the annotatingElement .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:feature_OwnedFeatureChaining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureChaining</code>	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
<code>oslc_sysmlv2:feature_OwnedFeatureInverting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureInverting</code>	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
<code>oslc_sysmlv2:feature_OwnedRedefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Redefinition</code>	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
<code>oslc_sysmlv2:feature_OwnedReferenceSubsetting</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:ReferenceSubsetting</code>	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
<code>oslc_sysmlv2:feature_OwnedSubsetting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Subsetting</code>	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
<code>oslc_sysmlv2:feature_OwnedTypeFeaturing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TypeFeaturing</code>	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
<code>oslc_sysmlv2:feature_OwnedTyping</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureTyping</code>	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
<code>oslc_sysmlv2:feature_OwningFeatureMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
<code>oslc_sysmlv2:feature_OwningType</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The Type that is the owningType of the owningFeatureMembership of this Feature .
<code>oslc_sysmlv2:feature_Type</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
<code>oslc_sysmlv2:metadataFeature_Metaclass</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Metaclass</code>	The type of this MetadataFeature , which must be a Metaclass .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout .
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-157].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ObjectiveMembership>
- **Summary:** ObjectiveMembershipShape
- **Description:** An **ObjectiveMembership** is a **FeatureMembership** that indicates that its **ownedObjectiveRequirement** is the objective **RequirementUsage** for its **owningType**, which must be a **CaseDefinition** or **CaseUsage**.

ObjectiveMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.

oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType , making it an ownedFeature of the owningType .
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership .
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType .
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:objectiveMembership_OwnedObjectiveRequirement	Exactly-one	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsage that is the ownedMemberFeature of this RequirementUsage.
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-158].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Feature>
- **Summary:** FeatureShape
- **Description:** A **Feature** is a **Type** that classifies relations between multiple things (in the universe). The domain of the relation is the intersection of the **featuringTypes** of the **Feature**. (The domain of a **Feature** with no **featuringTypes** is implicitly the most general **Type Base: :Anything** from the Kernel Semantic Library.) The co-domain of the relation is the intersection of the **types** of the **Feature**. .

Feature Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
---------------	--------	-----------	------------	----------------	-------	-------------

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the <code>effectiveName()</code> operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-159].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#EnumerationDefinition`
- **Summary:** EnumerationDefinitionShape
- **Description:** An **EnumerationDefinition** is an **AttributeDefinition** all of whose instances are given by an explicit list of **enumeratedValues**. This is realized by requiring that the **EnumerationDefinition** have **isVariation = true**, with the **enumeratedValues** being its **variants**.

dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example ‘Car’.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:enumerationDefinition_EnumeratedValue	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	EnumerationUsages of this EnumerationDefinition that have distinct, fixed values. Each enumeratedValue specifies one of the allowed instances of the EnumerationDefinition .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-160].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#ActionUsage`
- **Summary:** ActionUsageShape
- **Description:** An **ActionUsage** is a **Usage** that is also a **Step**, and, so, is typed by a **Behavior**. Nominally, if the type is an **ActionDefinition**, an **ActionUsage** is a **Usage** of that **ActionDefinition** within a system. However, other kinds of kernel **Behaviors** are also allowed, to permit use of **Behaviors** from the Kernel Model Libraries.

ActionUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:actionUsage_ActionDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that are the types of this ActionUsage. Nominally, these would be ActionDefinitions, but other kinds of Kernel Behaviors are also allowed, to permit use of Behaviors from the Kernel Model Libraries.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>endFeatures</code> of this <code>Type</code> that are <code>ownedFeatures</code> .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc_sysmlv2:usage_Definition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Classifier</code>	The <code>Classifiers</code> that are the types of this <code>Usage</code> . Nominally, these are <code>Definitions</code> , but other kinds of Kernel <code>Classifiers</code> are also allowed, to permit use of <code>Classifiers</code> from the Kernel Model Libraries.
<code>oslc_sysmlv2:usage_DirectedUsage</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Usage</code>	The <code>usages</code> of this <code>Usage</code> that are <code>directedFeatures</code> .
<code>oslc_sysmlv2:usage_IsReference</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this <code>Usage</code> is a referential <code>Usage</code> , that is, it has <code>isComposite = false</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:usage_IsVariation</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
<code>oslc_sysmlv2:usage_NestedAction</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ActionUsage</code>	The ActionUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAllocation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AllocationUsage</code>	The AllocationUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAnalysisCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AnalysisCaseUsage</code>	The AnalysisCaseUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedAttribute</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:AttributeUsage</code>	The <code>>AttributeUsages</code> that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedCalculation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CalculationUsage</code>	The CalculationUsage that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedCase</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:CaseUsage</code>	The CaseUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedConcern</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConcernUsage</code>	The ConcernUsages that are nestedUsages of this Usage .
<code>oslc_sysmlv2:usage_NestedConnection</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConnectorAsUsage</code>	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
<code>oslc_sysmlv2:usage_NestedConstraint</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:ConstraintUsage</code>	The ConstraintUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-161].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#Disjoining`
- **Summary:** DisjoiningShape
- **Description:** A **Disjoining** is a **Relationship** between **Types** asserted to have interpretations that are not shared (disjoint) between them, identified as **typeDisjoined** and **disjoiningType**. For example, a **Classifier** for mammals is disjoint from a **Classifier** for minerals, and a **Feature** for people's parents is disjoint from a **Feature** for their children.

Disjoining Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:disjoining_DisjoiningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	Type asserted to be disjoint with the typeDisjoined.
oslc_sysmlv2:disjoining_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	A typeDisjoined that is also an owningRelatedElement.
oslc_sysmlv2:disjoining_TypeDisjoined	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	Type asserted to be disjoint with the disjoiningType.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-162].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Association>
- **Summary:** AssociationShape
- **Description:** An **Association** is a **Relationship** and a **Classifier** to enable classification of links between things (in the universe). The co-domains (**types**) of the **associationEnd Features** are the **relatedTypes**, as co-domain and participants (linked things) of an **Association** identify each other.

Association Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:association_AssociationEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of the Association that identify the things that can be related by it. A concrete Association must have at least two associationEnds . When it has exactly two, the Association is called a <i>binary Association</i> .
oslc_sysmlv2:association_RelatedType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The types of the associationEnds of the Association , which are the relatedElements of the Association considered as a Relationship .
oslc_sysmlv2:association_SourceType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The source relatedType for this Association . It is the first relatedType of the Association .
oslc_sysmlv2:association_TargetType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The target relatedTypes for this Association . This includes all the relatedTypes other than the sourceType .
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:relationship_IsImplied</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
<code>oslc_sysmlv2:relationship_OwnedRelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> of this Relationship that are owned by the Relationship.
<code>oslc_sysmlv2:relationship_OwningRelatedElement</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElement</code> of this Relationship that owns the Relationship, if any.
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the <code>source</code> and <code>target</code> Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The <code>relatedElements</code> to which this Relationship is considered to be directed.
<code>oslc_sysmlv2:type_DifferencingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>differencingTypes</code> are asserted to be those of the first of those <code>Types</code> , but not including those of the remaining <code>Types</code> . For example, a <code>Classifier</code> might be the difference of a <code>Classifier</code> for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a <code>Classifier</code> for people of a particular sex, identifying their children not of that sex (because the interpretations of the children <code>Feature</code> that identify those of that sex are also interpretations of the <code>Classifier</code> for that sex).
<code>oslc_sysmlv2:type_DirectedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>features</code> of this <code>Type</code> that have a non-null <code>direction</code> .
<code>oslc_sysmlv2:type_EndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>features</code> of this <code>Type</code> with <code>isEnd</code> = <code>true</code> .
<code>oslc_sysmlv2:type_Feature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>featureMemberships</code> of this <code>Type</code> .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_FeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
<code>oslc_sysmlv2:type_InheritedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
<code>oslc_sysmlv2:type_InheritedMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Membership</code>	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
<code>oslc_sysmlv2:type_Input</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction in or inout..
<code>oslc_sysmlv2:type_IntersectingType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-163].
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#PartUsage>
- **Summary:** PartUsageShape
- **Description:** A [PartUsage](#) is a usage of a [PartDefinition](#) to represent a system or a part of a system. At least one of the [itemDefinitions](#) of the [PartUsage](#) must be a [PartDefinition](#).

PartUsage Properties

This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixes Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:feature_IsNonunique</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	isNonunique.
<code>oslc_sysmlv2:feature_IsOrdered</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether an order exists for the values of this Feature or not.
<code>oslc_sysmlv2:feature_IsPortion</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
<code>oslc_sysmlv2:feature_IsReadOnly</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether the values of this Feature can change over the lifetime of an instance of the domain.
<code>oslc_sysmlv2:feature_IsUnique</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether or not values for this Feature must have no duplicates or not.
<code>oslc_sysmlv2:feature_OwnedFeatureChaining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureChaining</code>	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
<code>oslc_sysmlv2:feature_OwnedFeatureInverting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureInverting</code>	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
<code>oslc_sysmlv2:feature_OwnedRedefinition</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Redefinition</code>	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
<code>oslc_sysmlv2:feature_OwnedReferenceSubsetting</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:ReferenceSubsetting</code>	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
<code>oslc_sysmlv2:feature_OwnedSubsetting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Subsetting</code>	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
<code>oslc_sysmlv2:feature_OwnedTypeFeaturing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:TypeFeaturing</code>	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
<code>oslc_sysmlv2:feature_OwnedTyping</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureTyping</code>	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:itemUsage_ItemDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Structure	The Structures that are the definitions of this ItemUsage. Nominally, these are ItemDefinitions, but other kinds of Kernel Structures are also allowed, to permit use of Structures from the Kernel Library.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:partUsage_PartDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartDefinition	The itemDefinitions of this PartUsage that are PartDefinitions.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage .
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage.
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage, if isVariation = true. If isVariation = false, then there must be no variants.
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships. If isVariation = true, then this must be all memberships of the Usage. If isVariation = false, then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-164].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Multiplicity>
- **Summary:** MultiplicityShape
- **Description:** A Multiplicity is a Feature whose co-domain is a set of natural numbers giving the allowed cardinalities of each typeWithMultiplicity. The cardinality of a Type is defined as follows, depending on whether the Type is a Classifier or Feature. .

Multiplicity Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:element_IsLibraryElement</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether this Element is contained in the ownership tree of a library model.
<code>oslc_sysmlv2:element_Name</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
<code>oslc_sysmlv2:element_OwnedAnnotation</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Annotation</code>	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
<code>oslc_sysmlv2:element_OwnedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
<code>oslc_sysmlv2:element_OwnedRelationship</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationships for which this Element is the owningRelatedElement .
<code>oslc_sysmlv2:element_Owner</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
<code>oslc_sysmlv2:element_OwningMembership</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:OwningMembership</code>	The owningRelationship of this Element , if that Relationship is a Membership .
<code>oslc_sysmlv2:element_OwningNamespace</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Namespace</code>	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
<code>oslc_sysmlv2:element_OwningRelationship</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Relationship</code>	The Relationship for which this Element is an ownedRelatedElement , if any.
<code>oslc_sysmlv2:element_QualifiedName</code>	Zero-or-one	false	unspecified	Either	<code>xsd:string</code>	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constrains the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-165].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#ConcernDefinition`
- **Summary:** ConcernDefinitionShape
- **Description:** A **ConcernDefinition** is a **RequirementDefinition** that one or more stakeholders may be interested in having addressed. These stakeholders are identified by the **ownedStakeholders** of the **ConcernDefinition**.

ConcernDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:behavior_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Behavior, which are defined as its directedFeatures, whose values are passed into and/or out of a performance of the Behavior.
oslc_sysmlv2:behavior_Step	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Step	The Steps that make up this Behavior.
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications, for which this Classifier is the subclassifier.
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures.
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships.
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition . Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages , even though these are ConnectorAsUsages but not ConnectionUsages .
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition .

Prefix Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition , if isVariation = true. If isVariation = false, the there must be no variants .
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships . If isVariation = true, then this must be all ownedMemberships of the Definition . If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:function_Expression	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Expression	The Expressions that are steps in the calculation of the result of this Function .
oslc_sysmlv2:function_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Function can be used as the function of a model-level evaluable InvocationExpression . Certain Functions from the Kernel Functions Library are considered to have isModelLevelEvaluable = true . For all other Functions it is false .
oslc_sysmlv2:function_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The result parameter of the Function , which is owned by the Function via a ReturnParameterMembership .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:requirementDefinition_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this RequirementDefinition that represent actors involved in the requirement.
oslc_sysmlv2:requirementDefinition_AssumedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The owned ConstraintUsages that represent assumptions of this RequirementDefinition , which are the ownedConstraints of the RequirementConstraintMemberships of the RequirementDefinition with kind = assumption .
oslc_sysmlv2:requirementDefinition_FramedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages framed by this RequirementDefinition , which are the ownedConcerns of all FramedConcernMemberships of the RequirementDefinition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:requirementDefinition_ReqId	Zero-or-one	false	unspecified	Either	xsd:string	An optional modeler-specified identifier for this RequirementDefinition (used, e.g., to link it to an original requirement text in some source document), which is the declaredShortName for the RequirementDefinition .
oslc_sysmlv2:requirementDefinition_RequiredConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The owned ConstraintUsages that represent requirements of this RequirementDefinition , derived as the ownedConstraints of the RequirementConstraintMemberships of the RequirementDefinition with kind = requirement .
oslc_sysmlv2:requirementDefinition_StakeholderParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this RequirementDefinition that represent stakeholders for th requirement.
oslc_sysmlv2:requirementDefinition_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this RequirementDefinition that represents its subject.
oslc_sysmlv2:requirementDefinition_Text	Zero-or-many	false	unspecified	Either	xsd:string	An optional textual statement of the requirement represented by this RequirementDefinition , derived from the bodies of the documentation of the RequirementDefinition .
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout ..
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings, having the Type as their typeUnioned.
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type. For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-166].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#ConcernUsage>
- **Summary:** ConcernUsageShape

- **Description:** A **ConcernUsage** is a **Usage** of a **ConcernDefinition**.

ConcernUsage Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:booleanExpression_Predicate	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The Predicate that types this BooleanExpression .
oslc_sysmlv2:concernUsage_ConcernDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ConcernDefinition	The ConcernDefinition that is the single type of this ConcernUsage.
oslc_sysmlv2:constraintUsage_ConstraintDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Predicate	The (single) Predicate that is the type of this ConstraintUsage . Nominally, this will be a ConstraintDefinition , but other kinds of Predicates are also allowed, to permit use of Predicates from the Kernel Model Libraries.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:expression_Function	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Function	The Function that types this Expression .
oslc_sysmlv2:expression_IsModelLevelEvaluable	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Expression meets the constraints necessary to be evaluated at <i>model level</i> , that is, using metadata within the model.
oslc_sysmlv2:expression_Result	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures , and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceUsage_IndividualDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OccurrenceDefinition	The at most one occurrenceDefinition that has isIndividual = true .
oslc_sysmlv2:occurrenceUsage_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceUsage represents the usage of the specific individual (or portion of it) represented by its individualDefinition .
oslc_sysmlv2:occurrenceUsage_OccurrenceDefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Class	The Classes that are the types of this OccurrenceUsage . Nominally, these are OccurrenceDefinitions , but other kinds of kernel Classes are also allowed, to permit use of Classes from the Kernel Model Libraries.
oslc_sysmlv2:occurrenceUsage_PortionKind	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:PortionKind	The kind of (temporal) portion of the life of the occurrenceDefinition represented by this OccurrenceUsage , if it is so restricted.
oslc_sysmlv2:requirementUsage_ActorParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this RequirementUsage that represent actors involved in the requirement.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:requirementUsage_AssumedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The owned ConstraintUsages that represent assumptions of this RequirementUsage , derived as the ownedConstraints of the RequirementConstraintMemberships of the RequirementUsage with kind = assumption .
oslc_sysmlv2:requirementUsage_FramedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages framed by this RequirementUsage , which are the ownedConcerns of all FramedConcernMemberships of the RequirementUsage .
oslc_sysmlv2:requirementUsage_ReqId	Zero-or-one	false	unspecified	Either	xsd:string	An optional modeler-specified identifier for this RequirementUsage (used, e.g., to link it to an original requirement text in some source document), which is the declaredShortName for the RequirementUsage .
oslc_sysmlv2:requirementUsage_RequiredConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The owned ConstraintUsages that represent requirements of this RequirementUsage , which are the ownedConstraints of the RequirementConstraintMemberships of the RequirementUsage with kind = requirement .
oslc_sysmlv2:requirementUsage_RequirementDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:RequirementDefinition	The RequirementDefinition that is the single definition of this RequirementUsage .
oslc_sysmlv2:requirementUsage_StakeholderParameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The parameters of this RequirementUsage that represent stakeholders for the requirement.
oslc_sysmlv2:requirementUsage_SubjectParameter	Exactly-one	false	Resource	Either	oslc_sysmlv2:Usage	The parameter of this RequirementUsage that represents its subject.
oslc_sysmlv2:requirementUsage_Text	Zero-or-many	false	unspecified	Either	xsd:string	An optional textual statement of the requirement represented by this RequirementUsage , derived from the bodies of the documentation of the RequirementUsage..
oslc_sysmlv2:step_Behavior	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Behavior	The Behaviors that type this Step .
oslc_sysmlv2:step_Parameter	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The parameters of this Step , which are defined as its directedFeatures , whose values are passed into and/or out of a performance of the Step .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .

oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-167].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Classifier>
- **Summary:** ClassifierShape
- **Description:** A **Classifier** is a **Type** that classifies:.

Classifier Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.

Standards Track Work Product

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element , derived as the ownedRelatedElements of the ownedRelationships of this Element .
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element , derived as the owningRelatedElement of the owningRelationship of this Element , if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .

Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
<code>oslc_sysmlv2:type_IsAbstract</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
<code>oslc_sysmlv2:type_IsConjugated</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Indicates whether this Type has an ownedConjugator .
<code>oslc_sysmlv2:type_IsSufficient</code>	Exactly-one	false	unspecified	Either	<code>xsd:boolean</code>	Whether all things that meet the classification conditions of this Type must be classified by the Type .
<code>oslc_sysmlv2:type_Multiplicity</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Multiplicity</code>	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
<code>oslc_sysmlv2:type_Output</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All features related to this Type by FeatureMemberships that have direction out or inout .
<code>oslc_sysmlv2:type_OwnedConjugator</code>	Zero-or-one	false	Resource	Either	<code>oslc_sysmlv2:Conjugation</code>	A Conjugation owned by this Type for which the Type is the originalType .
<code>oslc_sysmlv2:type_OwnedDifferencing</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Differencing</code>	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All endFeatures of this Type that are ownedFeatures .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-168].

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** `http://open-services.net/ns/sysmlv2#ItemDefinition`
- **Summary:** ItemDefinitionShape
- **Description:** An `ItemDefinition` is an `OccurrenceDefinition` of the `Structure` of things that may themselves be systems or parts of systems, but may also be things that are acted on by a system or parts of a system, but which do not necessarily perform actions themselves. This includes items that can be exchanged between parts of a system, such as water or electrical signals.

ItemDefinition Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>dcterms:contributor</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:created</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
<code>dcterms:creator</code>	Zero-or-many	false	AnyResource	Either	<code>oslc:Any</code>	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
<code>dcterms:description</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
<code>dcterms:identifier</code>	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
<code>dcterms:modified</code>	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.
<code>dcterms:source</code>	Zero-or-one	false	Resource	Reference	<code>oslc:Any</code>	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
<code>dcterms:title</code>	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:classifier_OwnedSubclassification	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subclassification	The ownedSpecializations of this Classifier that are Subclassifications , for which this Classifier is the subclassifier .
oslc_sysmlv2:definition_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Definition that are directedFeatures .
oslc_sysmlv2:definition_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Definition is for a variation point or not. If true, then all the memberships of the Definition must be VariantMemberships .
oslc_sysmlv2:definition_OwnedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are ownedUsages of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The AttributeUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The code>CaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are ownedUsages of this Definition. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:definition_OwnedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The EnumerationUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The FlowConnectionUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are ownedUsages of this Definition.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are ownedUsages of this Definition .
oslc_sysmlv2:definition_OwnedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Definition .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:definition_OwnedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_OwnedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are ownedUsages of this Definition.
oslc_sysmlv2:definition_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Definition (not necessarily owned).
oslc_sysmlv2:definition_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Definition as a variation point Definition, if isVariation = true. If isVariation = false, the there must be no variants.
oslc_sysmlv2:definition_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Definition that are VariantMemberships. If isVariation = true, then this must be all ownedMemberships of the Definition. If isVariation = false, then variantMembership must be empty.
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element.
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name. It may act as a modeler-specified identifier for the Element, though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true, meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may not contain any implied Relationships. That is, either all required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveName() operation. By default, it is the same as the declaredName, but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations, for which this Element is the annotatedElement.
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace.
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace, which are the memberElements of all memberships of the Namespace.
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace, including (at least) the union of ownedMemberships and importedMemberships.
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports, for which the Namespace is the importOwningNamespace.
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace, which are the ownedMemberElements of the ownedMemberships of the ..

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:occurrenceDefinition_IsIndividual	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this OccurrenceDefinition is constrained to represent single individual.
oslc_sysmlv2:occurrenceDefinition_LifeClass	Zero-or-one	false	Resource	Either	oslc_sysmlv2:LifeClass	If isIndividual is true, a LifeClass that specializes this OccurrenceDefinition , restricting it to represent an individual.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:type_OwnedDisjoining</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Disjoining</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Disjoinings</code> , for which the <code>Type</code> is the <code>typeDisjoined Type</code> .
<code>oslc_sysmlv2:type_OwnedEndFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	All <code>endFeatures</code> of this <code>Type</code> that are <code>ownedFeatures</code> .
<code>oslc_sysmlv2:type_OwnedFeature</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Feature</code>	The <code>ownedMemberFeatures</code> of the <code>ownedFeatureMemberships</code> of this <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedFeatureMembership</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:FeatureMembership</code>	The <code>ownedMemberships</code> of this <code>Type</code> that are <code>FeatureMemberships</code> , for which the <code>Type</code> is the <code>owningType</code> . Each such <code>FeatureMembership</code> identifies an <code>ownedFeature</code> of the <code>Type</code> .
<code>oslc_sysmlv2:type_OwnedIntersecting</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Intersecting</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Intersectings</code> , have the <code>Type</code> as their <code>typeIntersected</code> .
<code>oslc_sysmlv2:type_OwnedSpecialization</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Specialization</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Specializations</code> , for which the <code>Type</code> is the <code>specific Type</code> .
<code>oslc_sysmlv2:type_OwnedUnioning</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Unioning</code>	The <code>ownedRelationships</code> of this <code>Type</code> that are <code>Unionings</code> , having the <code>Type</code> as their <code>typeUnioned</code> .
<code>oslc_sysmlv2:type_UnioningType</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Type</code>	The interpretations of a <code>Type</code> with <code>unioningTypes</code> are asserted to be the same as those of all the <code>unioningTypes</code> together, which are the <code>Types</code> derived from the <code>unioningType</code> of the <code>ownedUnionings</code> of this <code>Type</code> . For example, a <code>Classifier</code> for people might be the union of <code>Classifiers</code> for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-169].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

- **Describes:** http://open-services.net/ns/sysmlv2#StateSubactionMembership
- **Summary:** StateSubactionMembershipShape
- **Description:** A StateSubactionMembership is a FeatureMembership for an entry, do or exit ActionUsage of a StateDefinition or StateUsage..

StateSubactionMembership Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.
dcterms:modified	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of latest resource modification.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:source	Zero-or-one	false	Resource	Reference	oslc:Any	The resource URI a client can perform a get on to obtain the original non-OSLC AM formatted resource that was used to create this resource. The source resource is usually a binary or proprietary format that the service provider can consume and convert into an OSLC AM format. The service may use content negotiation with the Accept header to obtain the desired content type.
dcterms:title	Exactly-one	false	XMLLiteral	N/A	Unspecified	Title of the resource represented as rich text in XHTML content.
dcterms:type	Zero-or-many	false	string	N/A	Unspecified	A short string representation for the type, for example 'Car'.
jazz_am:derives	Zero-or-many	false	Resource	Reference	oslc:Any	The resource that derives from another resource originated from or is significantly influenced by the referenced resource. For example a model element derives from a requirement.
jazz_am:elaborates	Zero-or-many	false	Resource	Reference	oslc:Any	This resource elaborates the referenced resource.
jazz_am:external	Zero-or-many	false	Resource	Reference	oslc:Any	A generic link from a resource to an external web page.
jazz_am:refine	Zero-or-many	false	Resource	Reference	oslc:Any	The target is a refinement of the source. (e.g. a use case scenario might be a refinement of a textual requirement that describes the interaction).
jazz_am:satisfy	Zero-or-many	false	Resource	Reference	oslc:Any	The model element satisfies the requirement (e.g. The use case satisfies a functional requirement).
jazz_am:trace	Zero-or-many	false	Resource	Reference	oslc:Any	The model element has a trace to the requirement (e.g. An attribute or its value are traced to a requirement).
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement.
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element, if that Relationship is a Membership.
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element, which is the membershipOwningNamespace of the owningMembership of this Element, if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement, if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element, represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespaces from a root Namespace to this Element.
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace. This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName, but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element.
oslc_sysmlv2:featureMembership_OwnedMemberFeature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that this FeatureMembership relates to its owningType, making it an ownedFeature of the owningType.
oslc_sysmlv2:featureMembership_OwningType	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that owns this FeatureMembership.
oslc_sysmlv2:featuring_Feature	Exactly-one	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that is featured by the featuringType.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:featuring_Type	Exactly-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that features the featureOfType ..
oslc_sysmlv2:membership_MemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes a member of the membershipOwningNamespace due to this Membership .
oslc_sysmlv2:membership_MemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the memberElement .
oslc_sysmlv2:membership_MemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_MembershipOwningNamespace	Exactly-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace of which the memberElement becomes a member due to this Membership ..
oslc_sysmlv2:membership_MemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name of the memberElement relative to the membershipOwningNamespace .
oslc_sysmlv2:membership_Visibility	Exactly-one	false	unspecified	Either	oslc_sysmlv2:VisibilityKind	Whether or not the Membership of the memberElement in the membershipOwningNamespace is publicly visible outside that Namespace .
oslc_sysmlv2:owningMembership_OwnedMemberElement	Exactly-one	false	Resource	Either	oslc_sysmlv2:Element	The Element that becomes an ownedMember of the membershipOwningNamespace due to this OwningMembership .
oslc_sysmlv2:owningMembership_OwnedMemberElementId	Exactly-one	false	unspecified	Either	xsd:string	The elementId of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberName	Zero-or-one	false	unspecified	Either	xsd:string	The name of the ownedMemberElement .
oslc_sysmlv2:owningMembership_OwnedMemberShortName	Zero-or-one	false	unspecified	Either	xsd:string	The shortName of the ownedMemberElement .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
<code>oslc_sysmlv2:relationship_RelatedElement</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
<code>oslc_sysmlv2:relationship_Source</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements from which this Relationship is considered to be directed..
<code>oslc_sysmlv2:relationship_Target</code>	Zero-or-many	false	Resource	Either	<code>oslc_sysmlv2:Element</code>	The relatedElements to which this Relationship is considered to be directed.
<code>oslc_sysmlv2:stateSubactionMembership_Action</code>	Exactly-one	false	Resource	Either	<code>oslc_sysmlv2:ActionUsage</code>	The ActionUsage that is the ownedMemberFeature of this StateSubactionMembership .
<code>oslc_sysmlv2:stateSubactionMembership_Kind</code>	Exactly-one	false	unspecified	Either	<code>oslc_sysmlv2:StateSubactionKind</code>	Whether this StateSubactionMembership is for an entry , do or exit ActionUsage ..
<code>oslc:instanceShape</code>	Zero-or-one	false	Resource	Reference	<code>oslc:ResourceShape</code>	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
<code>oslc:serviceProvider</code>	Zero-or-many	false	Resource	Reference	<code>oslc:ServiceProvider</code>	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
<code>oslc:shortTitle</code>	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML <code></code> element [sml-170] .
<code>rdf:type</code>	Zero-or-many	false	Resource	Reference	<code>rdfs:Class</code>	The resource type URIs.

- **Describes:** <http://open-services.net/ns/sysmlv2#Subsetting>
- **Summary:** SubsettingShape

- **Description:** **Subsetting** is **Specialization** in which the **specific** and **general Types** are **Features**. This means all values of the **subsettingFeature** (on instances of its domain, i.e., the intersection of its **featuringTypes**) are values of the **subsettingFeature** on instances of its domain. To support this the domain of the **subsettingFeature** must be the same or specialize (at least indirectly) the domain of the **subsettingFeature** (via **Specialization**), and the co-domain (intersection of the **types**) of the **subsettingFeature** must specialize the co-domain of the **subsettingFeature**.

Subsetting Properties

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
dcterms:contributor	Zero-or-many	false	AnyResource	Either	oslc:Any	Contributor or contributors to the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:created	Zero-or-one	false	dateTime	N/A	Unspecified	Timestamp of resource creation.
dcterms:creator	Zero-or-many	false	AnyResource	Either	oslc:Any	Creator or creators of the resource. It is likely that the target resource will be a foaf:Person but that is not necessarily the case.
dcterms:description	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Descriptive text about resource represented as rich text in XHTML content.
dcterms:identifier	Exactly-one	true	string	N/A	Unspecified	A unique identifier for a resource. Typically read-only and assigned by the service provider when a resource is created. Not typically intended for end-user display.

oslc_sysmlv2:connector_Association	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Association	The Associations that type the Connector .
oslc_sysmlv2:connector_ConnectorEnd	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The endFeatures of a Connector , which redefine the endFeatures of the associations of the Connector . The connectorEnds determine via ReferenceSubsetting Relationships which Features are related by the Connector .
oslc_sysmlv2:connector_RelatedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Features that are related by this Connector considered as a Relationship and that restrict the links it identifies, given by the referenced Features of the connectorEnds of the Connector .
oslc_sysmlv2:connector_SourceFeature	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Feature	The source relatedFeature for this Connector . It is the first relatedFeature .
oslc_sysmlv2:connector_TargetFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The target relatedFeatures for this Connector . This includes all the relatedFeatures other than the sourceFeature .
oslc_sysmlv2:element_AliasIds	Zero-or-many	false	unspecified	Either	xsd:string	Various alternative identifiers for this Element. Generally, these will be set by tools.
oslc_sysmlv2:element_DeclaredName	Zero-or-one	false	unspecified	Either	xsd:string	The declared name of this Element .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_DeclaredShortName	Zero-or-one	false	unspecified	Either	xsd:string	An optional alternative name for the Element that is intended to be shorter or in some way more succinct than its primary name . It may act as a modeler-specified identifier for the Element , though it is then the responsibility of the modeler to maintain the uniqueness of this identifier within a model or relative to some other context.
oslc_sysmlv2:element_Documentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Documentation	The Documentation owned by this Element.
oslc_sysmlv2:element_ElementId	Exactly-one	false	unspecified	Either	xsd:string	The globally unique identifier for this Element. This is intended to be set by tooling, and it must not change during the lifetime of the Element.
oslc_sysmlv2:element_IsImpliedIncluded	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all necessary implied Relationships have been included in the ownedRelationships of this Element. This property may be true, even if there are not actually any ownedRelationships with isImplied = true , meaning that no such Relationships are actually implied for this Element. However, if it is false, then ownedRelationships may <i>not</i> contain any implied Relationships. That is, either <i>all</i> required implied Relationships must be included, or none of them.
oslc_sysmlv2:element_IsLibraryElement	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Element is contained in the ownership tree of a library model.
oslc_sysmlv2:element_Name	Zero-or-one	false	unspecified	Either	xsd:string	The name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveName() operation. By default, it is the same as the declaredName , but this is overridden for certain kinds of Elements to compute a name even when the declaredName is null.
oslc_sysmlv2:element_OwnedAnnotation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Annotation	The ownedRelationships of this Element that are Annotations , for which this Element is the annotatedElement .
oslc_sysmlv2:element_OwnedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements owned by this Element, derived as the ownedRelatedElements of the ownedRelationships of this Element.
oslc_sysmlv2:element_OwnedRelationship	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationships for which this Element is the owningRelatedElement .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:element_Owner	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The owner of this Element, derived as the owningRelatedElement of the owningRelationship of this Element, if any.
oslc_sysmlv2:element_OwningMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:OwningMembership	The owningRelationship of this Element , if that Relationship is a Membership .
oslc_sysmlv2:element_OwningNamespace	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Namespace	The Namespace that owns this Element , which is the membershipOwningNamespace of the owningMembership of this Element , if any.
oslc_sysmlv2:element_OwningRelationship	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Relationship	The Relationship for which this Element is an ownedRelatedElement , if any.
oslc_sysmlv2:element_QualifiedName	Zero-or-one	false	unspecified	Either	xsd:string	The full ownership-qualified name of this Element , represented in a form that is valid according to the KerML textual concrete syntax for qualified names (including use of unrestricted name notation and escaped characters, as necessary). The qualifiedName is null if this Element has no owningNamespace or if there is not a complete ownership chain of named Namespace s from a root Namespace to this Element .
oslc_sysmlv2:element_ShortName	Zero-or-one	false	unspecified	Either	xsd:string	The short name to be used for this Element during name resolution within its owningNamespace . This is derived using the effectiveShortName() operation. By default, it is the same as the declaredShortName , but this is overridden for certain kinds of Elements to compute a shortName even when the declaredName is null.
oslc_sysmlv2:element_TextualRepresentation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TextualRepresentation	The TextualRepresentations that annotate this Element .
oslc_sysmlv2:feature_ChainingFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The Feature that are chained together to determine the values of this Feature , derived from the chainingFeatures of the ownedFeatureChainings of this Feature , in the same order. The values of a Feature with chainingFeatures are the same as values of the last Feature in the chain, which can be found by starting with the values of the first Feature (for each instance of the domain of the original Feature), then using each of those as domain instances to find the values of the second Feature in chainingFeatures, and so on, to values of the last Feature .
oslc_sysmlv2:feature_Direction	Zero-or-one	false	unspecified	Either	oslc_sysmlv2:FeatureDirectionKind	Indicates how values of this Feature are determined or used (as specified for the FeatureDirectionKind).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_EndOwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is related to this Feature by an EndFeatureMembership in which the Feature is an ownedMemberFeature .
oslc_sysmlv2:feature_FeaturingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that feature this Feature , such that any instance in the domain of the Feature must be classified by all of these Types , including at least all the featuringTypes of its typeFeaturings . If the Feature is chained, then the featuringTypes of the first Feature in the chain are also featuringTypes of the chained Feature .
oslc_sysmlv2:feature_IsComposite	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the Feature is a composite feature of its featuringType . If so, the values of the Feature cannot exist after its featuring instance no longer does.
oslc_sysmlv2:feature_IsDerived	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can always be computed from the values of other Features .
oslc_sysmlv2:feature_IsEnd	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not the this Feature is an end Feature , requiring a different interpretation of the multiplicity of the Feature .
oslc_sysmlv2:feature_IsNonunique	Exactly-one	false	unspecified	Either	xsd:boolean	isNonunique.
oslc_sysmlv2:feature_IsOrdered	Exactly-one	false	unspecified	Either	xsd:boolean	Whether an order exists for the values of this Feature or not.
oslc_sysmlv2:feature_IsPortion	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature are contained in the space and time of instances of the domain of the Feature and represent the same thing as those instances.
oslc_sysmlv2:feature_IsReadOnly	Exactly-one	false	unspecified	Either	xsd:boolean	Whether the values of this Feature can change over the lifetime of an instance of the domain.
oslc_sysmlv2:feature_IsUnique	Exactly-one	false	unspecified	Either	xsd:boolean	Whether or not values for this Feature must have no duplicates or not.
oslc_sysmlv2:feature_OwnedFeatureChaining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureChaining	The ownedRelationships of this Feature that are FeatureChainings , for which the Feature will be the featureChained .
oslc_sysmlv2:feature_OwnedFeatureInverting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureInverting	The ownedRelationships of this Feature that are FeatureInvertings and for which the Feature is the featureInverted .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:feature_OwnedRedefinition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Redefinition	The ownedSubsettings of this Feature that are Redefinitions , for which the Feature is the redefiningFeature .
oslc_sysmlv2:feature_OwnedReferenceSubsetting	Zero-or-one	false	Resource	Either	oslc_sysmlv2:ReferenceSubsetting	The one ownedSubsetting of this Feature , if any, that is a ReferenceSubsetting , for which the Feature is the referencingFeature .
oslc_sysmlv2:feature_OwnedSubsetting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Subsetting	The ownedSpecializations of this Feature that are Subsettings , for which the Feature is the subsettingFeature .
oslc_sysmlv2:feature_OwnedTypeFeaturing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TypeFeaturing	The ownedRelationships of this Feature that are TypeFeaturings and for which the Feature is the featureOfType .
oslc_sysmlv2:feature_OwnedTyping	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureTyping	The ownedSpecializations of this Feature that are FeatureTypings , for which the Feature is the typedFeature .
oslc_sysmlv2:feature_OwningFeatureMembership	Zero-or-one	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMembership that owns this Feature as an ownedMemberFeature , determining its owningType .
oslc_sysmlv2:feature_OwningType	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Type	The Type that is the owningType of the owningFeatureMembership of this Feature .
oslc_sysmlv2:feature_Type	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	Types that restrict the values of this Feature , such that the values must be instances of all the types . The types of a Feature are derived from its typings and the types of its subsettings . If the Feature is chained, then the types of the last Feature in the chain are also types of the chained Feature .
oslc_sysmlv2:namespace_ImportedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The Memberships in this Namespace that result from the ownedImports of this Namespace .
oslc_sysmlv2:namespace_Member	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The set of all member Elements of this Namespace , which are the memberElements of all memberships of the Namespace .
oslc_sysmlv2:namespace_Membership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships in this Namespace , including (at least) the union of ownedMemberships and importedMemberships .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:namespace_OwnedImport	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Import	The ownedRelationships of this Namespace that are Imports , for which the Namespace is the importOwningNamespace .
oslc_sysmlv2:namespace_OwnedMember	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The owned members of this Namespace , which are the ownedMemberElements of the ownedMemberships of the ..
oslc_sysmlv2:namespace_OwnedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	The ownedRelationships of this Namespace that are Memberships , for which the Namespace is the membershipOwningNamespace .
oslc_sysmlv2:relationship_IsImplied	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Relationship was generated by tooling to meet semantic rules, rather than being directly created by a modeler.
oslc_sysmlv2:relationship_OwnedRelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements of this Relationship that are owned by the Relationship.
oslc_sysmlv2:relationship_OwningRelatedElement	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Element	The relatedElement of this Relationship that owns the Relationship, if any.
oslc_sysmlv2:relationship_RelatedElement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The Elements that are related by this Relationship, derived as the union of the source and target Elements of the Relationship.
oslc_sysmlv2:relationship_Source	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements from which this Relationship is considered to be directed..
oslc_sysmlv2:relationship_Target	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Element	The relatedElements to which this Relationship is considered to be directed.
oslc_sysmlv2:type_DifferencingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with differencingTypes are asserted to be those of the first of those Types , but not including those of the remaining Types . For example, a Classifier might be the difference of a Classifier for people and another for people of a particular nationality, leaving people who are not of that nationality. Similarly, a feature of people might be the difference between a feature for their children and a Classifier for people of a particular sex, identifying their children not of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_DirectedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The features of this Type that have a non-null direction .
oslc_sysmlv2:type_EndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features of this Type with isEnd = true .
oslc_sysmlv2:type_Feature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the featureMemberships of this Type .
oslc_sysmlv2:type_FeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The FeatureMemberships for features of this Type , which include all ownedFeatureMemberships and those inheritedMemberships that are FeatureMemberships (but does <i>not</i> include any importedMemberships).
oslc_sysmlv2:type_InheritedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All the memberFeatures of the inheritedMemberships of this Type that are FeatureMemberships .
oslc_sysmlv2:type_InheritedMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Membership	All Memberships inherited by this Type via Specialization or Conjugation . These are included in the derived union for the memberships of the Type .
oslc_sysmlv2:type_Input	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction in or inout ..
oslc_sysmlv2:type_IntersectingType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with intersectingTypes are asserted to be those in common among the intersectingTypes , which are the Types derived from the intersectingType of the ownedIntersectings of this Type . For example, a Classifier might be an intersection of Classifiers for people of a particular sex and of a particular nationality. Similarly, a feature for people's children of a particular sex might be the intersection of a Feature for their children and a Classifier for people of that sex (because the interpretations of the children Feature that identify those of that sex are also interpretations of the Classifier for that sex).
oslc_sysmlv2:type_IsAbstract	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether instances of this Type must also be instances of at least one of its specialized Types .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_IsConjugated	Exactly-one	false	unspecified	Either	xsd:boolean	Indicates whether this Type has an ownedConjugator .
oslc_sysmlv2:type_IsSufficient	Exactly-one	false	unspecified	Either	xsd:boolean	Whether all things that meet the classification conditions of this Type must be classified by the Type .
oslc_sysmlv2:type_Multiplicity	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Multiplicity	An ownedMember of this Type that is a Multiplicity , which constraints the cardinality of the Type . If there is no such ownedMember , then the cardinality of this Type is constrained by all the Multiplicity constraints applicable to any direct supertypes.
oslc_sysmlv2:type_Output	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All features related to this Type by FeatureMemberships that have direction out or inout ..
oslc_sysmlv2:type_OwnedConjugator	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Conjugation	A Conjugation owned by this Type for which the Type is the originalType .
oslc_sysmlv2:type_OwnedDifferencing	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Differencing	The ownedRelationships of this Type that are Differencings , having this Type as their typeDifferenced .
oslc_sysmlv2:type_OwnedDisjoining	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Disjoining	The ownedRelationships of this Type that are Disjoinings , for which the Type is the typeDisjoined Type .
oslc_sysmlv2:type_OwnedEndFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	All endFeatures of this Type that are ownedFeatures .
oslc_sysmlv2:type_OwnedFeature	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Feature	The ownedMemberFeatures of the ownedFeatureMemberships of this Type .
oslc_sysmlv2:type_OwnedFeatureMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FeatureMembership	The ownedMemberships of this Type that are FeatureMemberships , for which the Type is the owningType . Each such FeatureMembership identifies an ownedFeature of the Type .
oslc_sysmlv2:type_OwnedIntersecting	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Intersecting	The ownedRelationships of this Type that are Intersectings , have the Type as their typeIntersected .
oslc_sysmlv2:type_OwnedSpecialization	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Specialization	The ownedRelationships of this Type that are Specializations , for which the Type is the specific Type .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:type_OwnedUnioning	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Unioning	The ownedRelationships of this Type that are Unionings , having the Type as their typeUnioned .
oslc_sysmlv2:type_UnioningType	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Type	The interpretations of a Type with unioningTypes are asserted to be the same as those of all the unioningTypes together, which are the Types derived from the unioningType of the ownedUnionings of this Type . For example, a Classifier for people might be the union of Classifiers for all the sexes. Similarly, a feature for people's children might be the union of features dividing them in the same ways as people in general.
oslc_sysmlv2:usage_Definition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Classifier	The Classifiers that are the types of this Usage . Nominally, these are Definitions , but other kinds of Kernel Classifiers are also allowed, to permit use of Classifiers from the Kernel Model Libraries.
oslc_sysmlv2:usage_DirectedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The usages of this Usage that are directedFeatures .
oslc_sysmlv2:usage_IsReference	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is a referential Usage , that is, it has isComposite = false .
oslc_sysmlv2:usage_IsVariation	Exactly-one	false	unspecified	Either	xsd:boolean	Whether this Usage is for a variation point or not. If true, then all the memberships of the Usage must be VariantMemberships .
oslc_sysmlv2:usage_NestedAction	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ActionUsage	The ActionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAllocation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AllocationUsage	The AllocationUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAnalysisCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AnalysisCaseUsage	The AnalysisCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedAttribute	Zero-or-many	false	Resource	Either	oslc_sysmlv2:AttributeUsage	The code>AttributeUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedCalculation	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CalculationUsage	The CalculationUsage that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:CaseUsage	The CaseUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConcern	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConcernUsage	The ConcernUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedConnection	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConnectorAsUsage	The ConnectorAsUsages that are nestedUsages of this Usage. Note that this list includes BindingConnectorAsUsages and SuccessionAsUsages, even though these are ConnectorAsUsages but not ConnectionUsages.
oslc_sysmlv2:usage_NestedConstraint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ConstraintUsage	The ConstraintUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedEnumeration	Zero-or-many	false	Resource	Either	oslc_sysmlv2:EnumerationUsage	The code>EnumerationUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedFlow	Zero-or-many	false	Resource	Either	oslc_sysmlv2:FlowConnectionUsage	The code>FlowConnectionUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedInterface	Zero-or-many	false	Resource	Either	oslc_sysmlv2:InterfaceUsage	The InterfaceUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedItem	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ItemUsage	The ItemUsages that are nestedUsages of this Usage.
oslc_sysmlv2:usage_NestedMetadata	Zero-or-many	false	Resource	Either	oslc_sysmlv2:MetadataUsage	The MetadataUsages that are nestedUsages of this of this Usage.
oslc_sysmlv2:usage_NestedOccurrence	Zero-or-many	false	Resource	Either	oslc_sysmlv2:OccurrenceUsage	The OccurrenceUsages that are nestedUsages of this Usage.

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedPart	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PartUsage	The PartUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedPort	Zero-or-many	false	Resource	Either	oslc_sysmlv2:PortUsage	The PortUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedReference	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ReferenceUsage	The ReferenceUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRendering	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RenderingUsage	The RenderingUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedRequirement	Zero-or-many	false	Resource	Either	oslc_sysmlv2:RequirementUsage	The RequirementUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedState	Zero-or-many	false	Resource	Either	oslc_sysmlv2:StateUsage	The StateUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedTransition	Zero-or-many	false	Resource	Either	oslc_sysmlv2:TransitionUsage	The TransitionUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedUsage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are ownedFeatures of this Usage .
oslc_sysmlv2:usage_NestedUseCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:UseCaseUsage	The UseCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedVerificationCase	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VerificationCaseUsage	The VerificationCaseUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_NestedView	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewUsage	The ViewUsages that are nestedUsages of this Usage .

Prefixed Name	Occurs	Read-only	Value-type	Representation	Range	Description
oslc_sysmlv2:usage_NestedViewpoint	Zero-or-many	false	Resource	Either	oslc_sysmlv2:ViewpointUsage	The ViewpointUsages that are nestedUsages of this Usage .
oslc_sysmlv2:usage_OwningDefinition	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Definition	The Definition that owns this Usage (if any).
oslc_sysmlv2:usage_OwningUsage	Zero-or-one	false	Resource	Either	oslc_sysmlv2:Usage	The Usage in which this Usage is nested (if any).
oslc_sysmlv2:usage_Usage	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages that are features of this Usage (not necessarily owned).
oslc_sysmlv2:usage_Variant	Zero-or-many	false	Resource	Either	oslc_sysmlv2:Usage	The Usages which represent the variants of this Usage as a variation point Usage , if isVariation = true . If isVariation = false , then there must be no variants .
oslc_sysmlv2:usage_VariantMembership	Zero-or-many	false	Resource	Either	oslc_sysmlv2:VariantMembership	The ownedMemberships of this Usage that are VariantMemberships . If isVariation = true , then this must be all memberships of the Usage . If isVariation = false , then variantMembership must be empty.
oslc:instanceShape	Zero-or-one	false	Resource	Reference	oslc:ResourceShape	The URI of a Resource Shape that describes the possible properties, occurrence, value types, allowed values and labels. This shape information is useful in displaying the subject resource as well as guiding clients in performing modifications. Instance shapes may be specific to the authenticated user associated with the request that retrieved the resource, the current state of the resource and other factors and thus should not be cached.
oslc:serviceProvider	Zero-or-many	false	Resource	Reference	oslc:ServiceProvider	A link to the resource's OSLC Service Provider. There may be cases when the subject resource is available from a service provider that implements multiple domain specifications, which could result in multiple values for this property.
oslc:shortTitle	Zero-or-one	false	XMLLiteral	N/A	Unspecified	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element [sml-172].
rdf:type	Zero-or-many	false	Resource	Reference	rdfs:Class	The resource type URIs.

3. Conformance

OSLC SysML v2 servers **MUST** follow the constraints defined here where required, and with the meanings defined here.

OSLC SysML v2 servers **MAY** provide additional constraints for specific purposes.

Clause Number	Requirement
sml-172	Short name identifying a resource, often used as an abbreviated identifier for presentation to end-users. SHOULD include only content that is valid inside an XHTML element
